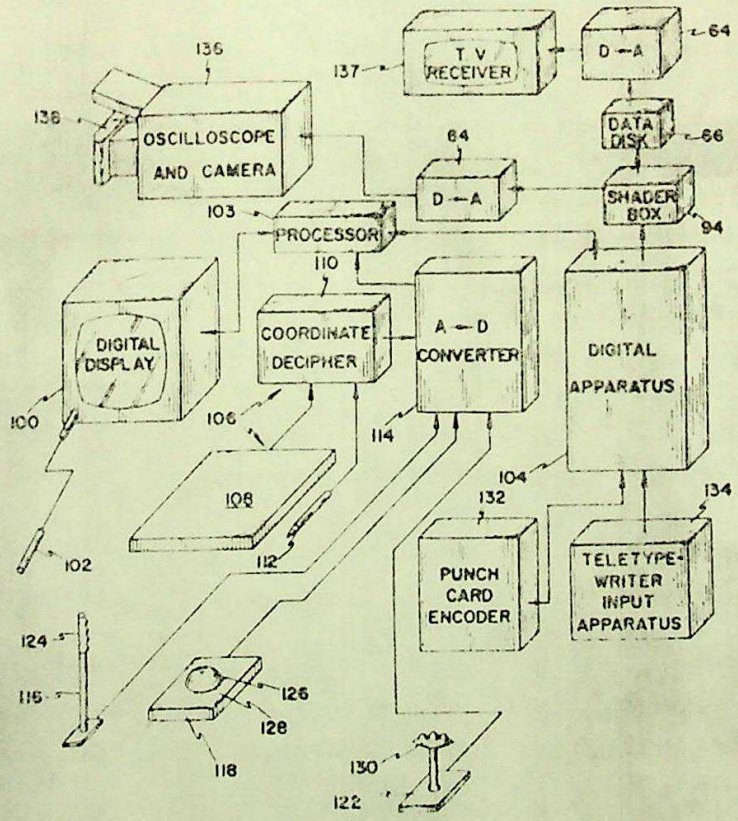
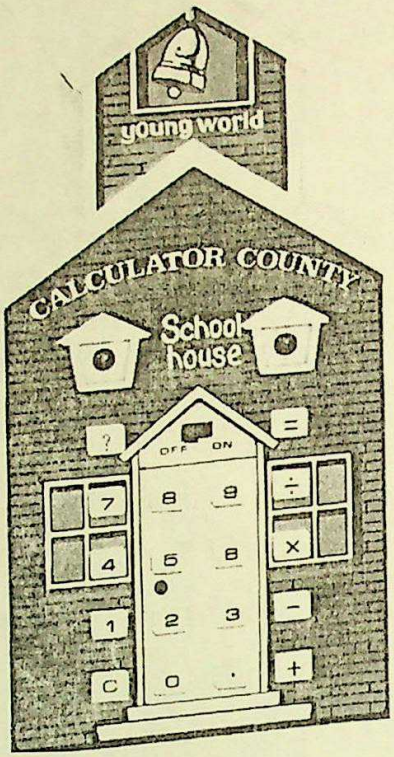
ABSTRACT: A method and system for electronically generating and displaying two-dimensional perspective images which visually define three dimensional objects by providing electrical signals representative of the surfaces of an object, converting, ordering and utilizing the signals to identify and display only visible surfaces and to control brightness along the visible surfaces of the eventual electronic display. More specifically, units of the electrical signals define surface portions of the object. These units are converted to define the projections of the surfaces defined by the units onto a two-dimensional image or view plane. The converted units are sorted to conform to the scanning pattern of the display device and those units which are to be visible, depending on the desired orientation of the object, are determined. The visual characteristics of the visible units are then calculated and converted to suitable form for controlling the intensity of the electronic display.





The educational toy category has also been electrified with the introduction of teaching devices such as this "Calculator County Schoolhouse" from Midland.

reacting to the trend, doubling and tripling the amount of electronic merchandise they carried last Christmas. **Dennis Frank** of Houston's **Playhouse** chain reports that during fourth quarter 1977 "about five percent" of his merchandise will fall into the category. "But," he adds, "that's four-and-a-half percent more than last year."

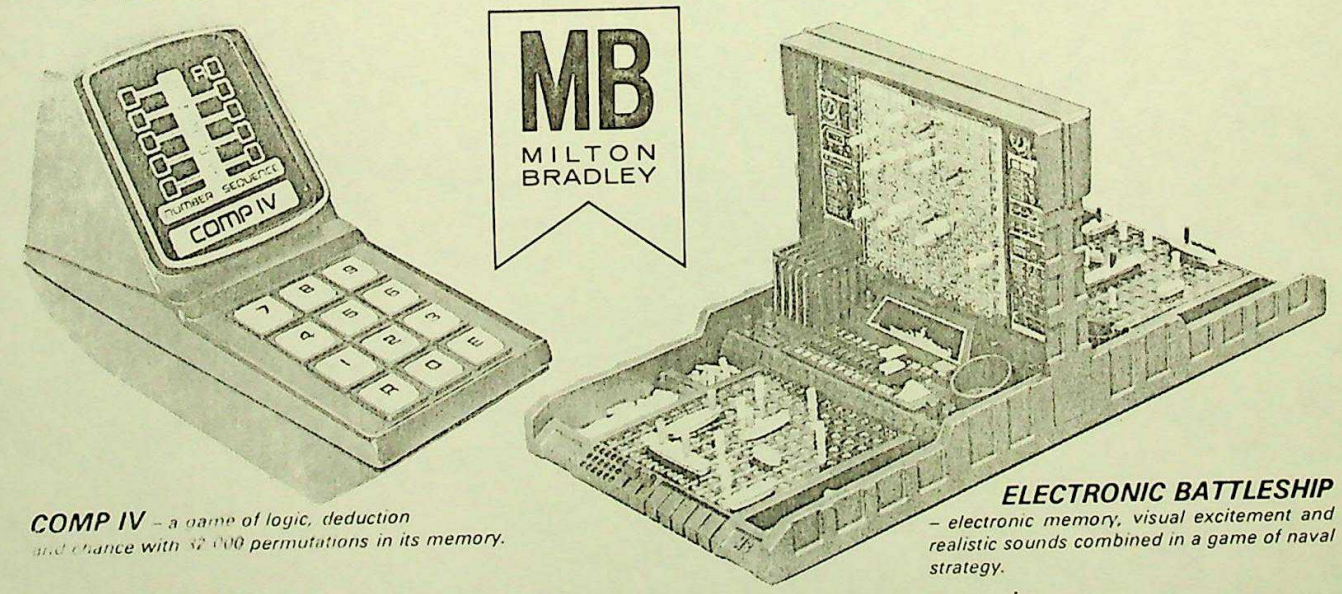
As electronic toys go through their infancy, manufacturers and retailers are searching for the formula that will produce maximum sales in the category. Among the questions being asked:

* *How much money is the consumer prepared to pay for a leisure time item?*
* *How low can prices be expected to go?*
* *Where in a general merchandise store can the shopper expect to find an electronic game?*
* *How can the games be best displayed?*

Though the answers to none of these queries are readily apparent, it's acknowledged that *somebody* is on the right track. Video game manufacturers sold an estimated 3½ million pieces last year and, keyed by the introduction of programmable systems by several companies, project that between eight and ten million units will move through retail stores during 1977.

Since video games were introduced by Magnavox in 1972, they have had the electronic end of the toy business pretty much to themselves. But an avalanche of target games, pin-ball games, calculator games and even a couple of preschool items are taking advantage of chip technology and vying for the consumer dollar in 1977.

MILTON BRADLEY PROUDLY PRESENTS TWO EXCITING ELECTRONIC GAMES



COMP IV *– a game of logic, deduction and chance with 32,000 permutations in its memory.*

ELECTRONIC BATTLESHIP *– electronic memory, visual excitement and realistic sounds combined in a game of naval strategy.*

[57] **ABSTRACT**

A time perception test instrument for performing a self-administered time perception test by a test subject, including a plurality of individual flashing lights arranged in an array and with all of the lights except one flashing intermittently at regular intervals and with one of the lights flashing at irregular intervals and with a plurality of test buttons corresponding in number to the flashing lights and with one test button associated with each flashing light to allow the test subject to select any individual one of the flashing lights judged by the test subject to be the light flashing at irregular intervals and with a random selector for randomly selecting one of the plurality of lights to flash at irregular intervals after each selection by the test subject. A coincidence detector produces a coincidence signal when the test subject selects a particular one of the flashing lights which is flashing at irregular intervals.

Electronic games

that amuse, challenge, and outwit you

copy in 273/85G

Inside these smart games, sophisticated microprocessors make them great adversaries

By BILL HAWKINS

I looked down at the small clear-plastic box in my hand. The tip of my finger covered one of the paper-thin squares loosely packed inside. "Each one of those silicon chips can hold up to 128,000 pieces of digital information," said Jim Muller, technical spokesman for Texas Instruments. "Newer ones we're working on will store over 256,000 bits."

Exotic parts for a sophisticated computer system? They could be, but in fact each was a typical component TI uses in one of its $50 word-teaching games for kids. And it is just one sample of the incredible microcircuitry used in today's electronic games.

The miniature size, flexibility, availability, and low cost of these circuits have drastically changed the game and toy industry. Electronic video-game pioneers such as Atari, Magnavox, Fairchild, and Coleco are now competing against the non-electronic- and board-game makers: Parker Brothers, Mattel, Marx, Mego, and Milton Bradley, to name a few.

There are video games that attach to your TV, using its screen for colorful graphic displays of

Continued

Microprocessor is the key ingredient to all these—and many more—electronic games. They can be programmed to play anything from checkers to "Simon."

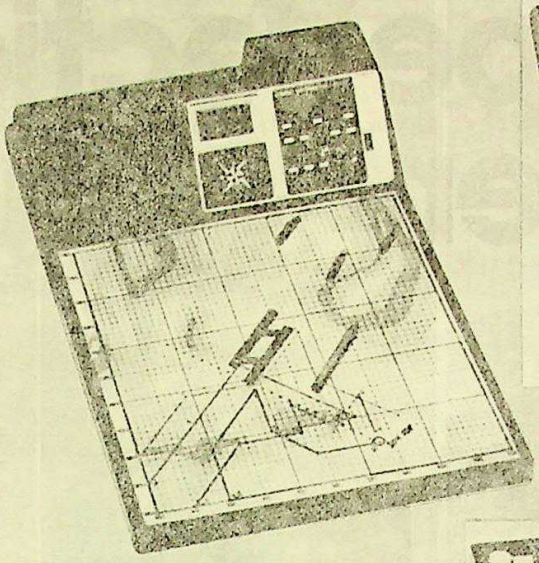
tennis, hockey, handball, practice, and two target games, the last with remote guns. On-screen scoring with sound effects are generated by the chips, as are color outputs for use with a color-generator circuit. It is this flexibility that has made the GI chips so attractive with such manufacturers as Magnavox, Lloyd's, Monteverdi, Venturi, Hanimex, etc. Simply jumpering or switching certain pins of the 28-pin IC adds as much complexity (and cost) to the final product as desired.

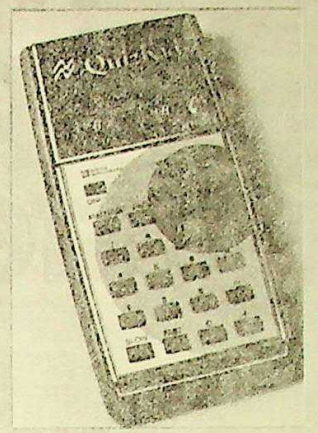
Speaking at last year's winter Consumer Electronics Show, Dr. E.A. Sack, Vice President for GI, stated that his company believes in the dedicated approach to microprocessor game designs. GI backed up this position by introducing its Gemini video game circuits that are capable of playing more than 50 different games. While some of the new chips allow a manufacturer to make stand-alone games that can be reprogrammed, others can be added to existing games that use the GI 8600 eight-game chip (tennis, hockey, soccer, squash, practice, gridball, basketball, and basketball practice). Using much of the 8699's video and player-control circuits and adding an 8603 chip, for example, the normal ball-type games can be transformed into a road race when game number 1 is selected on the control switch. The idea, of course, is to allow a manufacturer to upgrade his entire stock easily and relatively inexpensively simply by adding one IC chip.

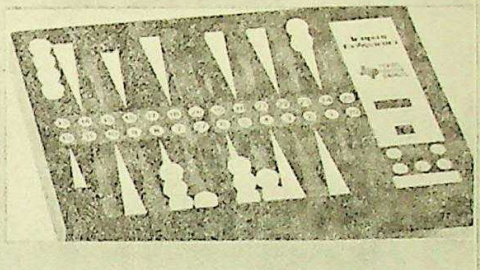
GI has just recently begun delivery of its AY-3-8700 single-chip tank game. This is a 28-pin IC package that provides 32 rotational angles of tank control for two players. Video outputs from the chip include left and right player tanks, shells, shell bursts, mines, fixed barriers, score, blanking, background, sync, and color-burst locator. Audio output circuitry is just as complete with tank-1 and tank-2 motor sounds, bearing and track squeals, and explosion and gun-fire envelopes. The chips are $9.95 each, but don't send in an order unless it is for 50,000 or more chips.

Microcomputers like Radio Shack's TRS-80 can be used to play video games or as educational tools.

MORE NONVIDEO GAMES







Three nonvideo games, clockwise from above: Parker Brothers' "Code Name: Sector," a microprocessor-based sub pursuit game; National Semiconductor's "Quiz Kid" calculator; and Texas Micro Games' "Computer Backgammon."

Among other companies in the electronic game business, APF Electronics has a broad line of video paddle games with two new additions—the Model 500 with 20 space-type games, including Space War, and an M1000 microprocessor programmable game at $149.95.

Sears, too, has increased its line of games, which begins at $20 and goes on up to a sophisticated programmable game that sells for $179.95 Sears' program library ranges from antiaircraft torpedo shooting to an outer-space game. Mid-priced dedicated games are available for other games like "Tank."

Microelectronic Systems' "Interact" is a joystick-and-keyboard-operated game that can be programmed by a *tape* system. Running at 810 bits/inch, the tapes set up the game to play Trail Blazers, Blackjack, or Regatta racing. You can also draw computerized color pictures on a TV screen. With a built-in cassette machine and alphanumeric keyboard input, it lists for $249.

Even though game manufacturers are now designing games for the home, office, and shirt pocket, this is just the beginning of a whole new era of gamesmanship. Datatime Corp. may be saying this with its new wristwatch, which gives time and date on a liquid-crystal display as well as allowing you to play Jackpot, Dive, and Roulette. A backlighted display on the $100 timepiece keeps you in action no matter what the hour.

Too, let us not overlook the home computer while we're exploring electronic games. Though computers are at the peak of the triangle in terms of numbers expected to be sold this year (owing to higher costs), a myriad of fun games can be played on a TV screen if you have your own computer. There are more possibilities, in fact, than any programmable-type video game has because you can create your own game programs as well as having access to an overwhelming amount of game software and written programs.

In spite of predictions in numbers and dollars for the future of electronic games, perhaps their real interest for all of us was best expressed by Nolan Bushnell, Chairman of Atari: "Only after you've experienced the sheer joy of slaughtering your best friend will you know the true meaning of fun." ◇

player exactly what is happening at any given time during game play.

The firm explains that "for strategic players, the 'Middle Flashing Number' repeats in a sequence. As the middle numbers 'Flashing' speed slows down, the player may note where their desired number appears in the sequence, and press the stop button when the number is between the machine's two selected numbers. The excitement mounts when the flashing number speeds up, at higher print levels."

When the game is not being played, the game shows a Banorama Display, which is described by the firm as "a smoothly moving banner message, as well as a melodious sound at the end of each message. The tone may be turned off by a rear switch when desired."

The unit also incorporates a locked vault door on the coin box, an anti-theft security fastener, a small light on the front panel which enables the customers to easily read the game instructions, a coin mechanism which is adjustable to a wide variety of the world's coins, and all three electronics modules are plugged into connectors, permitting ease of isolation of module malfunctions.

Each time the game is turned on, it performs a self-test check of the system's major components, simplifying and shortening service time by "Telling" the technician of any complications.

PLAYTHINGS, FEB. 1979

P. 275

Introducing the golden touch in electronic games.

Atari.

It's really the only name that's synonymous with the fun and excitement of electronic amusement.

After leading the way in arcade and home video games since the very beginning, we're ready to do great things in hand-held games.

With "Touch Me,"™ for example. A new, pocket-size version of an Atari game that's made millions in arcades since 1972.

"Touch Me" is a brain-teasing, computerized test of memory and coordination that captivates players from 7 to 70. The variety and excitement are built in, with three different games for 1-4 players, four levels of skill, plus color and sound.

Now there's no need to take chances with manufacturers who are just getting into electronic toys. Because with Atari, you get the leading name in the field. Built-in consumer acceptance. Quality and reliability to minimize problems with returns. National advertising support. Plus the great, proven games that only Atari can deliver.

Come to the Knickerbocker showroom at the Toy Fair and see for yourself: when it comes to electronics in toys, Atari has the Golden Touch.

Electronic Sea Battle from The Mego Corporation

Electronics *continued*

Industry agrees items should be sold with toys

manufacturers, have taken this step in the full knowledge that electronics are not just a Christmas category; they have quickly established themselves in the marketplace as year-round sellers.

Nick Underhill of Entex clearly sees a place for electronics in the store throughout the year.

"Electronics are a staple at this point," the Entex executive comments. "Electronic baseball and football games will always be around, they'll just keep improving each year."

Scott McWhinnie, vice-president of marketing at Schaper Manufacturing, feels that the process through which the electronic category must necessarily pass to become a staple is still in the evolutionary process.

"They will stabilize — I don't know in how many years — into staples. Like any hot category, there is a life cycle of so many years, after which the market gets glutted and plateaus off," opines McWhinnie.

Toy department goods

At the retail end, the manufacturers were in almost complete agreement that electronics toys and games should remain in toy departments — electronic preschool in the preschool section, electronic sci-fi items together with that general category, electronic vehicles with other ride-ems.

In looking at the question of how to merchandise electronics, Stan Harfenist, vice-president of sales and marketing at Knickerbocker Toy, remarks that "most electronics toys can be put in with other toy categories. Only big electronics such as arcade ones — bowling, pinball — should have their own separate category."

Harfenist also tackles the other part of the retail question: once a retailer decides where to put these products, he then faces the question of how does he best sell them to his customers.

"The most effective sales methods," says Harfenist, "are television, point-of-sales demonstrations, special promotional fliers, and catalogues just for electronics."

Skip Marson, president of Leisure Dynamics, adds: "Educate people about electronics toys through television. Point-of-purchase display units are also important."

Lakeside Games, a division of Leisure Dynamics, won an award for the display unit it has designed to sell the firm's electronic products.

Marson, explains that the unit is animated and familiarizes customers with the Lakeside Game line, although it does not actually have a playing capability.

Norman Sas, president of Tudor Games, sees working models also as an important part of the total sale picture — "People want to know what they are buying."

The current headache of steeply spiraling prices has presented another kind of challenge to the manufacturers this year. The plastics category has been particularly hard-hit and everyone is worrying out loud about what will happen between now and Christmas. The fact that this situation is playing against such global dramas as the one that has been unfolding in Iran, whose slowdown in oil shipments has been one of the main reasons for the cost increases on petrol-based products, makes it all the more difficult to come up with any foreseeable solution.

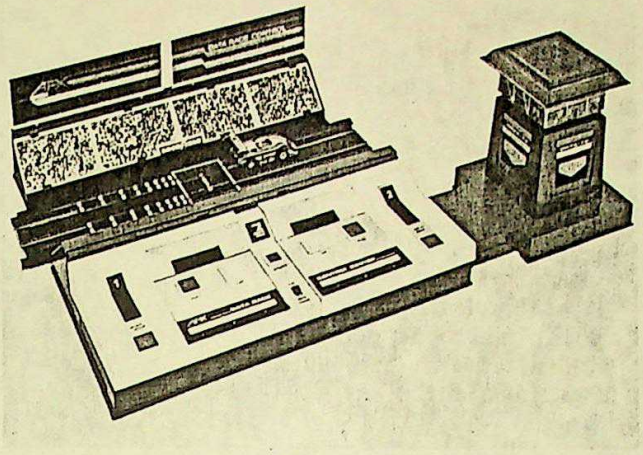
Shortages foreseen

Since the Iranian catastrophe has been sometime in coming, some of the manufacturers were able to forecast their predicament — and planned accordingly.

Comments George Dittomassi of Milton Bradley: "We had projected the cost increases and adjusted the price structure to accommodate this problem."

Tom Pearcey, sales manager of Logix, says that he does not foresee

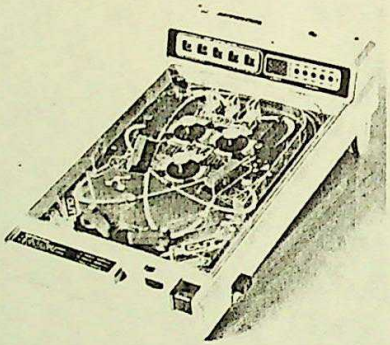
Speak & Spell from Texas Instruments offers fun with words to young and old alike.



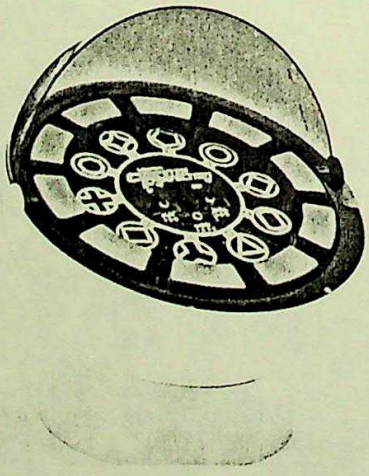
The AFX Data Race Computer Center from Aurora can program races, refuel cars, and has the sounds of racing.

Electronics *continued*

Manufacturers air pros and cons of outside firms entering toy field



The Atomic Arcade Pinball Ball from Tomy is propelled like an atomic particle into an atom. It caroms off the power bumpers as if it were in a magnetic field.



Lakeside's Computer Perfection is an electronic challenge of mind and memory. Four different electronic games and skills levels allow players to challenge the computer or compete with friends.

Everyone in electronics is openly delighted that an entirely new market has been created by the electronic toy and game category.

Stan Herman, manager of creative services at Aurora, recently acquired by the Marx organization, declares that "There are two markets actually — hobby and mass merchants. In the hobby shops, they tend to have electronics in a showcase where people have to ask for it as they would a watch or a hand calculator. But in the mass-merchandising stores, they are not generally displayed individually. They're displayed on a gondola on the floor."

Herman goes on to say that the electronics customer is "very brand conscious . . . we have brand-loyal customers. Aurora has a high percentage of awareness. Our major promotional TV campaign has also helped us at the point-of-purchase."

New firms in toys

In surveying manufacturers for this report, the matter of the entry into the toy market by traditional electronics firms came up time and time again. Both electronics firms and toy companies looked at this trend, sometimes positively, sometimes not.

"Most companies do not perceive us as competitors," Jim Muller of Texas Instruments comments. "One reason we do not seem to pose a threat is that our circuit supplying division is quite separate from our consumer products division."

He explains that TI is divided into several groups: the consumer products group, making watches and calculators. This group is located in Lubbock, Texas; the semi-conductor division, making circuits, which is located in Dallas. A subdivision of the semi-conductor division is the microprocessor division, located in Houston.

Roger Shiffman of Tiger Electronics says that General electronics companies may have a strong product, but their biggest problem may be in the area of marketing these items because "they still don't know how to sell to the toy market."

Although Tiger's parent company is a general electronics company, Shiffman himself as well as other key personnel have toy backgrounds, which gives them the distinct advantage of being able to combine toy marketing expertise with the parent firm's technological resources

Nick Underhill of Entex disagrees with those who think electronics firms can make an easy transition from calculators and watches to toys

Underhill remarks that "We have the expertise in the toy field; they do not. This type of switch from being a supplier to a manufacturer worked easily in the watch and calculator field. But it is difficult in the toy industry. We are a fashion industry with new concepts that are constantly changing."

Skip Marson of Leisure Dynamics says toy firms understand the business better than the newcomers.

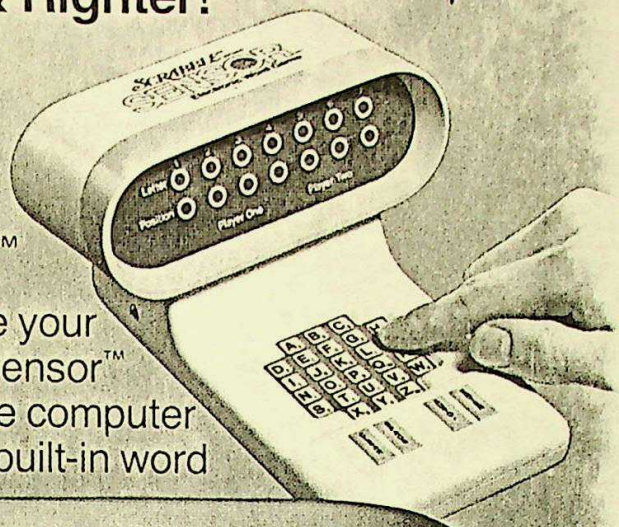
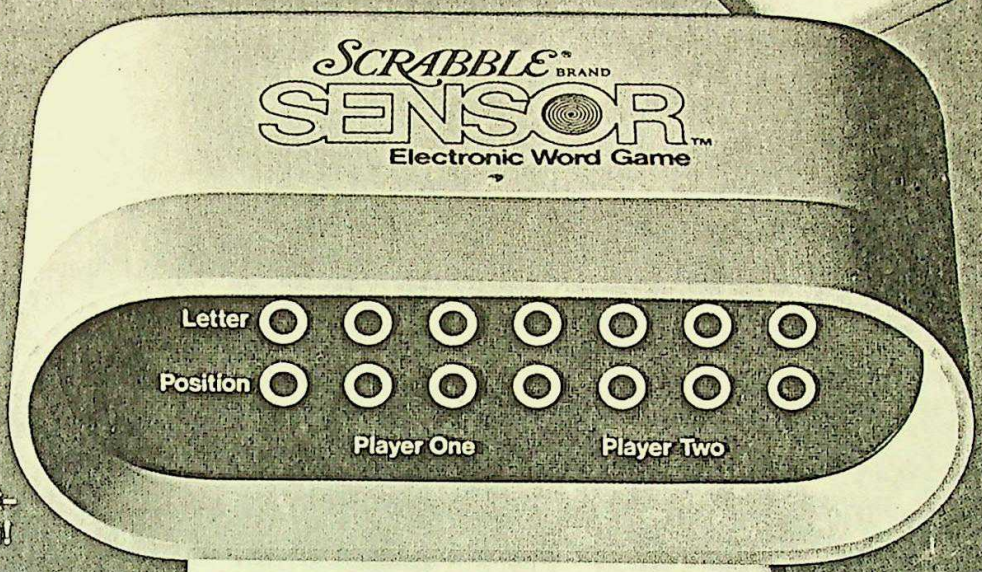
New from Selchow & Righter!

SCRABBLE® BRAND SENSOR™

Electronic Word Game

Punch in your hidden word and watch while your opponent tries to outsmart you, using the Sensor™ electronic brain! Or play it alone, against the computer —matching your wits against the Sensor™ built-in word bank. It's fun for everyone. A sure winner. Don't miss out.

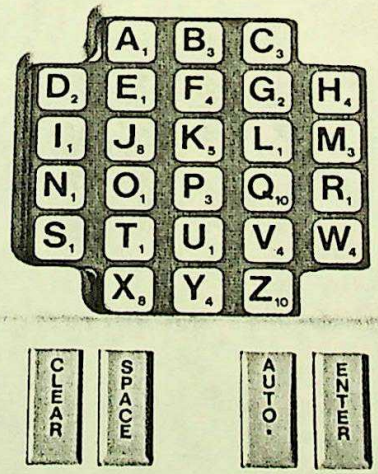


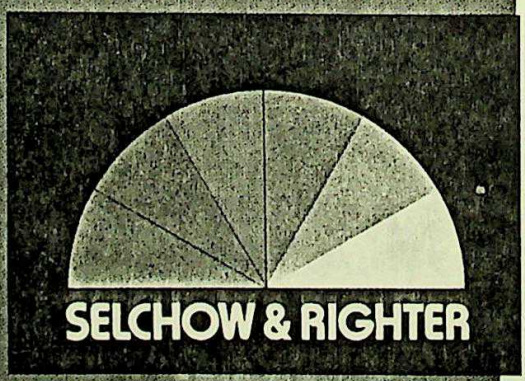


Heavy advertising support—including television!

Battery-operated—play it anywhere!
(Battery not included.)

From the company that brings you other big winners—SCRABBLE® brand word games.





Another name for fun and games.

Sales Office: 200 Fifth Ave., New York, NY 10010

We took the world's best-selling game and Electrified it.

New Electronic MasterMind.

Watch your sales light up. Because we'll be selling Electronic MasterMind on television. Then you'll be selling it to everyone who won't be able to resist a new way to play the world's most popular game: alone or with a partner.

Product, package and promotion: it all adds up to more profit and sales from Invicta.

So stock up. And get ready to cash in on Invicta's brightest new star: Electronic MasterMind.

Introducing Hand-held Minivid Games.

They put video game technology in the palm of your hand.

The revolution is on in hand-held games and Mego® is leading the way with its revolutionary line of Minivid games. These 6" x 4" games bring all the action of full-sized TV video games into the palm of your hand.

Figures move across the screen and realistic sounds keep the action moving. And you control it all!

Minivid games are the hand-held video games with a one or two player option. And each one is programmed with 4 game variations that are progressively more challenging.

With a retail price that makes them well within reach and a size that takes them everywhere, Minivid games herald a whole new age in hand-held games.

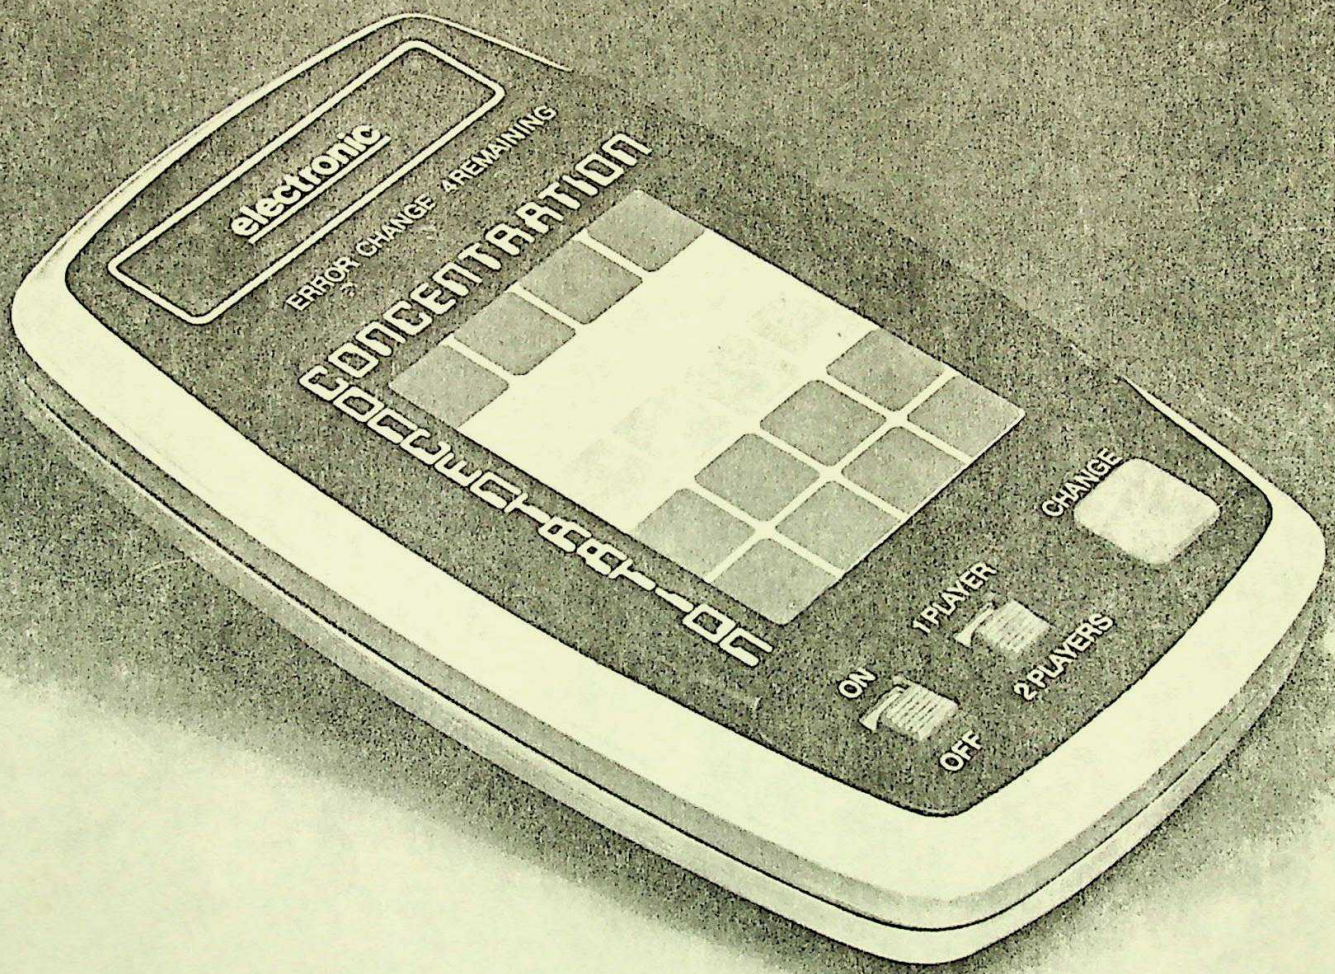
MEGO CORP

MEGO®. THE INNOVATORS.

LJN's mid-year introduction:

ELECTRONIC CONCENTRATION

the computer game of matching numbers



An electronic challenge that can be played solo or against a friend. Requiring memory and concentration to match color spots of equivalent value. Color spot value will change location with every game through the marvel of electronic circuitry. First shipment August 1979. For more details see your friendly neighborhood LJN salesman or representative (but don't wait too long).

[57] **ABSTRACT**

A novel game is disclosed featuring a playing field having at least three lanes and divided into at least six rungs. A gamepiece representing the player may be positioned in any one of the three lanes and is free to move in a first direction from one rung to the next; randomly generated obstacles advance in the opposite direction from rung to rung; the object of the game is for the player to avoid collision with the obstacle or obstacles. Two embodiments of the game are disclosed, the first simulating an automobile race course wherein the player's playing piece represents an automobile in motion and the obstacles represent competitors' cars being passed, in which case the object of the game is to pass a predetermined number of obstacles; and a second embodiment simulating a football playing field, wherein the player's piece represents the running back of the offensive team and the obstacles represent defensive tackles advancing towards the running back, in which case the object is to advance the ball the greatest possible number of yards and eventually score the maximum number of touchdowns. On account of the nature of the present invention, it is possible to implement it electronically with an inexpensive digital display having a relatively low number of discrete display elements.

Computer Kinetics Corp. Introduces Draw 5 Game

WESTLAKE VILLAGE, Calif. – Computer Kinetics Corp. has gone into production on their latest coin-op, counter top amusement game, Draw 5.

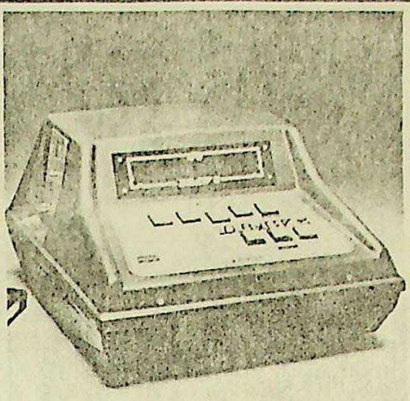
Draw 5, the company explained, "is a five card draw poker game for one or two players. The game has five discard buttons to give players the option of discarding any or all cards dealt. Draw 5 has a high game feature that allows the machine to be promoted on location. It has a cancel button to recover discarded cards, and a score button to display scores of all players in the game. After each game is over, the players final score can be recalled."

Draw 5's cabinet is bright red and black in color and is 17" wide x 17" deep x 9-1/2" high. It incorporates a built-in security fastener which permits the machine to be secured by a lock and chain on location.

The Computer Kinetics' Self Test feature is also incorporated into the game. This includes switch and lamp tests, RAM and ROM test, and a coin-mechanism test. Other features of the unit include a shock sensitive tilt mechanism designed to take any player abusing the game out of play, a modular service concept, a re-keyable vault door and an optional coin counter.

Export models which operate on various voltages and world coinages are also available. Multi-metered machines are available for export only.

Further information is available by writing to Computer Kinetics, 31129 Via Colinas, #701, Westlake Village, Calif. 91361.



DRAW 5: New from Computer Kinetics is this coin-operated tabletop electronic draw poker simulator with self-test.

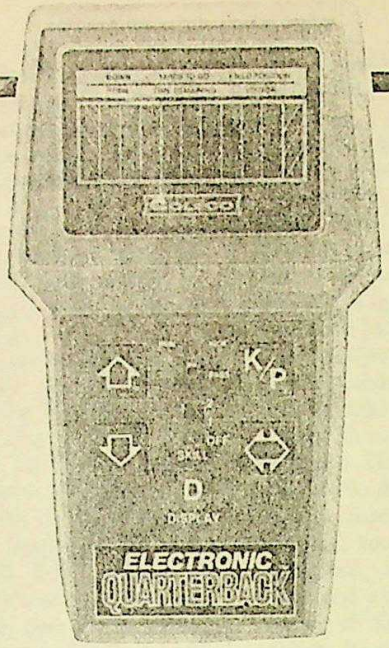
CONSUMER REPORTS
NOV. 1979



Electronic games

A couple of years ago, the craze in home entertainment was video games. That fad faded. Now toymakers are trying again. They have combined the electronic action of the video game with the portability of the pocket calculator. Result: the hand-held electronic game.

There are sports games played on miniature diamonds or gridirons, quizzes on math and spelling, games that require strategy and deduction, target games, and games that resist easy classification.

The games, which run on batteries, are for the most part plastic boxes slightly larger than pocket calculators. Some are expensive for toys: The 43 games we report on in the pages that follow cost from $9 to $55.

Since we couldn't fairly compare a baseball game with, say, a math quiz, we didn't rate the games against each other. We did end up with opinions, however, on how well each game did what it was supposed to do and whether the game was fun. Within their categories, the games are listed alphabetically.

Some of the games allow you to play against someone else. But most pit you against the permanent program in the game's brain, the tiny bit of silicon known as the one-chip microcomputer.

The complexity of the action, both visible and audible, varies widely. Sports and target games, for instance, are played on a field composed of an array of light-emitting diodes (LED's); the score is kept on a calculator-like display. You make your moves with buttons or switches.

Other games simply rely on a row of lights or a display of numbers and letters. That sort of game generally has a numbered or lettered keyboard for your input. Most of the games make appropriately electronic noises, which come from a tiny speaker inside the case. One game even talks.

All the games take ordinary batteries, usually 9-volt or AA sizes. We suggest you buy a few long-lived alkaline batteries along with a game, in anticipation that someone will play with it a lot. We measured battery drain and estimated the cost of replacement batteries for each game in typical use. In the following pages, "low energy cost" means 8 cents or less per hour; "medium energy cost," between 9 and 15 cents an hour; "high energy cost," more than 15 cents an hour.

With many of the games, you can avoid the expense of batteries entirely by using an a-c adapter. We've noted those that have a jack for such a device, which is available at extra cost. Games that use a 9-volt battery but have no jack will take a universal 9-volt adapter with snap connectors, such as the *Coleco 2098*, which costs about $6.

It's easy to leave a game on accidentally and run the batteries down—we did in our home-use tests. It's especially easy with games that lack a visible or audible signal to tell you when they're on. We've noted which games suffer that drawback. The *Texas Instruments* games are unique: They shut off if left idle.

Toys rarely have list prices. The prices given on these pages, therefore, are those our shoppers paid.

Warranties on toys are likely to be short, if they exist at all. But many stores will exchange defective games. And most manufacturers will—for a fee that works out to be about one-third to one-half the purchase price—replace or repair a game after the warranty runs out. Note that about 10 percent of the games we bought were defective or soon became so.

When the label gives a range of ages for which a game is suitable, we've included the range. But some of those label recommendations can't be taken seriously. Though most games give "adults" as the upper limit, some are so simple that they would quickly bore all but the youngest children.

A final caveat before you brave the toy-store crowds. Some toys labeled as electronic games are really the familiar battery-operated mechanical toys of holidays past, not sophisticated electronic games of the type reported on here. We recommend playing a game before you buy to be sure you're getting what you think you're getting.

Sports games

Computerized versions of baseball, basketball, and other popular sports compose the largest category of games we bought. Even without reading the instructions, a fan is likely to know most of the rules of these 15 games. The action of the sport is translated into an LED display that shows players and balls as moving blips. You can exert your skill to some degree by twiddling various controls to shoot a basket, say, or swing at a pitch. The display imitates the appropriate setting: a tiny gridiron, a miniature auto-racing track, or whatever.

All the games provide electronic sound effects. Sometimes the beeps and boops clue players to the action—one sound indicating a single, another a triple, for example. Or the effects may be purely atmospheric: the fanfare that follows a touchdown or the growl of a racer's engine as it revs through the "gears."

Some of the sports games claim to offer the "thrills and competition" of the real thing. They don't, of course. But many are fun in their own right. The best of the games give you enough control of the action to make speedy judgments in fast-changing and familiar situations.

Baseball

We played with five baseball games. Each display shows a small baseball diamond. All the games except the *Bandai* have a HIT button to press when the "ball," a moving light blip, sails over

home plate. The *Mattel* game, which allows control of running as well as of hitting, was the most complex and challenging, though the *Fonas Tri-1* also pleased baseball devotees on the staff.

Bandai Electronics Baseball 7931, $9. "Ages 6 and above." 1 game for 1 player. 1 skill level. Low energy cost. Uses 9-volt battery. No warranty.

Compared with the other baseball games, the *Bandai* is a bore. Its six display lights (labeled "single," "home run," "strike out," and so forth) blink on and off when you hold down a button. When you release the button, the light stops to tell you what has happened. Playing takes no skill at all. Score-keeping is mechanical, not electronic; scoring an entire game requires pencil and paper. The game also buzzes maddeningly and continuously as soon as it's switched on.

Entex Electronic Baseball 8001, $45. "Age 6 to adult." 2 games for 1 or 2 players. 1 skill level. Low energy cost. Uses 3 AA batteries. Has jack for a-c adapter. 3-month warranty.

The *Entex* can be played automatically or manually. In the automatic mode, you bat against the computer's pitches, which come over the plate periodically. In the manual mode another player, using the game's separate pitching control, can pitch you a curve, a slider, a fastball, a change-up, or a knuckleball. The computer does the fielding in both modes.

The display shows the count on the batter and the score in half-innings. Score sheets are provided to score games. Big, easy-to-see blips race around the field when there's a hit. A barrage of electronic sounds signals strikes, balls, outs, and various hits—but the instructions don't tell which sounds stand for what plays.

We found it far too easy to get hits, though that might add to the fun for children. Results also depend on chance rather than on the batter's timing. A game, true. But not much like baseball.

Fonas Tri-1 T600, $35. 3 games for 1 or 2 players. 1 skill level. Low energy cost. Uses 9-volt battery. 3-month warranty.

In this game, you are always at bat. Two persons can compete by taking turns. The computer sends blips to the batter's box when you press the PITCH key. A player can ignore pitches—which may be strikes or balls, fastballs or curves. Timing is important. Swinging early, for example, sends the ball to left field rather than to right or center.

Blips show a runner's progress around the bases. Tiny lights in the outfield indicate fouls, flies, groundouts, and every kind of base hit. The game allows for strategy, too: sacrifices, running on a groundout, and stealing bases. Double plays and extra innings are possible. A display at the top of the playing field records the statistics: inning, score, balls, strikes, and outs. Play is accompanied by electronic sounds reminiscent of a *Touch-Tone* phone. But you can follow the action without knowing what the noises mean, since the visual displays are easy to understand.

You can switch the *Tri-1* to a variant called Batting Champs, which lets you practice batting even in the middle of a game. Or you can play Star Chase, a sort of space-age game of tag. We much preferred the baseball, and we think other baseball fans would like it, too.

Mattel Electronics Baseball 2942, $27. "Ages 8 to 80." 1 game for 1 or 2 players. 2 skill levels. Low energy cost. Uses 9-volt battery. Has jack for a-c adapter. 3-month warranty.

In this game, too, your team is always up, and the computer always fields. A player presses the PITCH key and then decides whether to hit the ball. The pitch may be a curve, fastball, or change-up and may be ruled (by the computer) a strike or a ball. You can foul balls off by swinging too soon or too late.

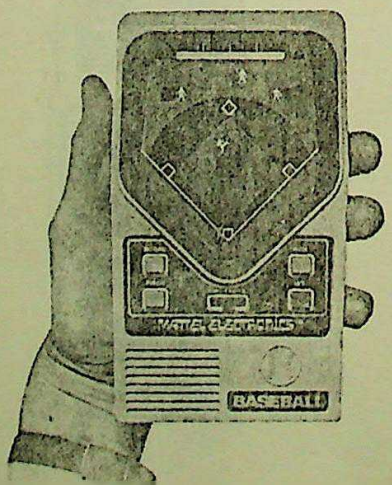
Bases light up when a runner lands on them, and the runner's progress is marked by lights between the bases. The game has a unique RUN key. Keep the RUN key depressed when there's a hit, and you might stretch a double into a triple or steal a base—or you might turn a clean single into a tag-out at second. The RUN key lends complexity and a dab of verisimilitude to the game, even at the simpler of its two skill levels.

A press of a button lights up an electronic scoreboard beside the field. It gives the same information a ball park's scoreboard does. A complete game, however, is five innings, not nine. The results of a hit are marked by sounds. Besides counting beeps to find out how many bases a fast runner might get on a hit, players must distinguish between "squeaks," "plops," "horns," "beeps," and "rising tones" to know what's going on. Some of us found the noises hard to follow, but others thought they made the game more challenging. All in all, the best of the baseball games.

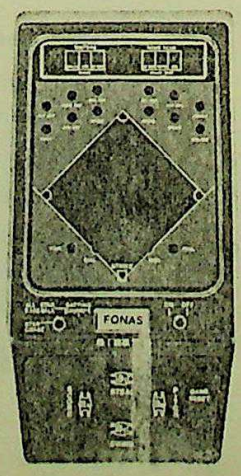
Tiger Computer Baseball 7480, $30. "Ages 10 to adult." 2 games for 1 or 2 players. 1 skill level. Medium energy cost. Uses 4 AA batteries. 3-month warranty.

In many ways, the *Tiger* is like the *Entex*. You bat against either the computer or a flesh-and-blood player who "pitches" to you from the field. The batter can wait out the pitch or swing at it. The pitcher can choose among fastballs, change-ups, and two kinds of curves. A scoreboard display shows the inning, runs scored, count on the batter, and so forth; lights show runners on base, though not their progress between bases. The game even allows such refinements as defensive positioning of players in the outfield, taking warm-up swings, and stepping out of the batter's box. For the record, the *Tiger* also plays "Take Me Out to the Ball Game" at the start and finish of a nine-inning game, and it provides a variety of sounds for each kind of play, though the instructions don't identify them.

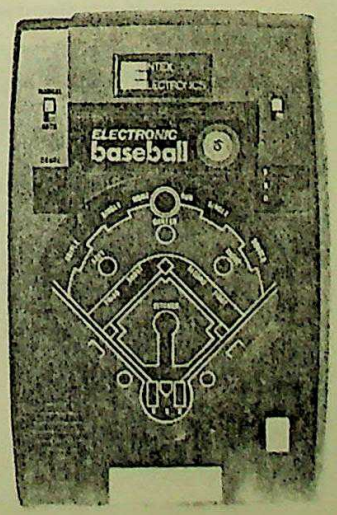
Mattel Baseball



Fonas Tri-1



Entex Electronic Baseball



The *Tiger* differed from the *Entex* in one important respect. We had a lot of trouble getting base hits—and none of CU's staff who tried *ever* managed to hit the game's fastball. That made the *Tiger* less fun than the *Mattel* or *Fonas*.

Football

Each of these games is played on a rectangular display that simulates a tiny football field in a tiny stadium, though for reasons of space only a nine-yard stretch of field is shown at a time. Score is kept automatically for a four-quarter game. And in each game, the player on the offense can move the ball to either side and down the field. The *Coleco* games outclass the *Mattel* because they allow you to pass the ball as well as run.

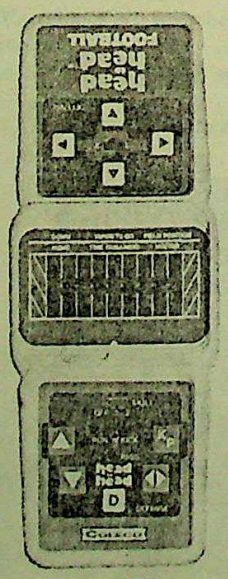
Coleco Head To Head Electronic Football 2140, $31. "Ages 8 to adult." 2 games for 1 or 2 players. 2 skill levels. Medium energy cost. Uses 9-volt battery. 3-month warranty.

Coleco Electronic Quarterback 2020, $30. "Ages 8 to adult." 1 game for 1 or 2 players. 2 skill levels. Low energy cost. Uses 9-volt battery. 3-month warranty.

Head to Head pits you against a computer defense or against another person who defends with the computer's help. You have running, passing, and kicking options, all governed by different rules. You can even change plays at the line of scrimmage, so the game is more complicated than most.

Buttons simultaneously control the progress of a runner (a bright, blinking blip) and of a pair of blockers (bright, unblinking blips) who protect him. On pass plays the quarterback enjoys similar protection. The defense (at least six dim blips) tries to stop the runner's progress, intercept passes, or latch onto fumbles.

Head to Head Electronic Football



When you play another person, who sits opposite you, the second player controls the motion of a backfield tackler.

Electronic Quarterback is essentially the same game without the option of human control of the defense.

In either game, a press of a button turns the whole field into a scoreboard, showing the down, yards to go, field position, and other information necessary to a quarterback. Electronic sound effects signify turnovers, field goals, and such.

We found the blips tough to see in a brightly lit room unless we looked directly down on the display. Still, we judged the games challenging at both skill levels. The two-person *Head to Head* model offers tackling and pass-interception control that *Electronic Quarterback* lacks, making *Head to Head* a more versatile game for only slightly more money.

Mattel Electronics Football 2024, $20. "Ages 8 to 80." 1 game for 1 or 2 players. 2 skill levels. Low energy cost. Uses 9-volt battery. Has jack for a-c adapter. 3-month warranty.

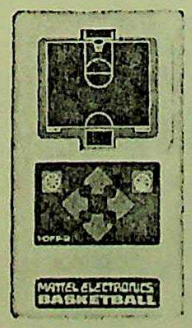
This game has buttons for moving a runner in three directions, a KICK button for punts or field goals (the computer decides which), and two keys to give automatic score, down, and yardage readouts. Instead of showing on the playing field, the score displays appear in small slots alongside the field.

Sound effects include referee whistles and a band that sounds "Charge." But the offense has only one man to run the ball, and there is no pass option, so the game lacks one of the most exciting possibilities real football has to offer. Clearly less enjoyable than the *Coleco* games.

Basketball

All these games are played on a half-court with one basket. Moving lights on the display indicate the offensive player's tries at getting a clear shot at the basket and the defensive team's attempts at blocking. Though we liked the *Mattel* basketball game more than the others, it still wasn't as much fun as the best of the baseball or football games.

Mattel Basketball



Bandai Electronics Basketball, $9. "Ages 6 and above." 1 game for 1 player. 1 skill level. Low energy cost. Uses 9-volt battery. No warranty.

Except for the presence of a half-court and new labels for the display lights ("jump shot," "free throw," "dunk," and so forth), this game is identical to the *Bandai* baseball game. Don't bother.

Coleco Head To Head Electronic Basketball 2150, $26. "Ages 8 to adult." 2 games for 1 or 2 players. 2 skill levels. Medium energy cost. Uses 9-volt battery. 3-month warranty.

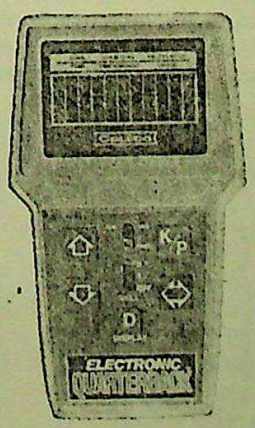
Like the *Head to Head* football game, this model permits playing against the computer or a live opponent. Either way, you're on the offense, using two PASS keys to move the "ball" blip around the game's half-court. Object: get a clear shot past an LED guard protecting the basket. When you compete with the computer, blips corresponding to a five-player defense move in random directions at random speed to block the shots. A live opponent can control the blocker by pressing buttons.

Elapsed time and scores are displayed electronically. We didn't find the abbreviated, multipurpose score display very helpful. Scoring baskets was quite a trick with this game because of the random actions of the defense. Too much is left to chance, we think, to make this game satisfying for very long.

Mattel Electronics Basketball 2437, $20. "Ages 8 to 80." 1 game for 1 or 2 players. 2 skill levels. Medium energy cost. Uses 9-volt battery. 3-month warranty.

In this game, you try to maneuver a single offensive player (bright blip) for an unblocked shot at the basket, while a five-player, computerized defense team (dim blips) moves randomly to block the way. Four buttons move the offensive

Electronic Quarterback



blip up, down, right, and left. Two SHOOT keys let you fire the ball toward the basket.

Depending on your play, you may score, lose the ball, recover a lost ball, and the like. There are no foul shots or penalties. Six different sounds signal that you've scored or that your shot has been blocked, among other things. The score display is somewhat cryptic.

Still, the keyboard is nicely designed, and the timing of the action is realistic enough for you to try several shots before turnover. If your play is speedy and you shoot when close to the basket, the game can be quite enjoyable.

Other sports

Mattel Electronics Auto Race 9879, $25. "Ages 8 to 80." 1 game for 1 player. 4 skill levels. Low energy cost. Uses 9-volt battery. 3-month warranty.

Tiger Raceway 7450, $30. 1 game for 1 player. 4 skill levels. Low energy cost. Uses 3 AA batteries. 3-month warranty.

Each of these games requires a player to maneuver a car (bright blip) through a pack of competing cars (dimmer blips) on a straight three-lane track. You try to cross the finish line four times (four "laps") in 99 seconds or less. A steering mechanism allows lane changing to avoid collisions, which spoil your time by bumping you back toward the starting line. Each model has a four-speed gear shift for changing speeds; faster speeds improve your time but make it tougher to avoid collisions. Both games display the elapsed time and make "varoom-varoom" noises.

The games differ slightly in the design of their lane-changing control. The *Tiger* has a tiny steering wheel about the size of a quarter (plus a counter to keep track of the number of collisions). The *Mattel* has a slightly concave thumb control that slides back and forth. Because the *Mattel* game provides faster action than the *Tiger*, we found it more of a challenge.

Mattel Electronics Soccer 1052, $27. "Ages 8 to 80." 1 game for 1 or 2 players. 2 skill levels. Low energy cost. Uses 9-volt battery. 3-month warranty.

Mattel's soccer game is virtually identical to its basketball game, though the playing-field display and goal are marked as befits soccer. Scoring goals here is much tougher than making baskets, however. The goalie is very fast and hard to fake out, but with practice you can score. Two soccer fans we turned loose on this game loved it.

Pulsonic Electronic Golf 72126, $25. "Ages 6 to adult." 1 game for 1 or 2 players. 1 skill level. Low energy cost. Uses 9-volt battery. No warranty.

The big display on this game simulates a fairway, a water hazard, a sand trap, two tees, and a putting green. Press a button that resembles a golf ball and lights blink on the course to show the path of the shot. The par changes nine times for a nine-hole "course." A small display notes par and keeps track of the score for each hole and for the game.

You can play with another person by passing the game back and forth. (The *Pulsonic* comes with a score sheet for two players.) Electronic noises accompany each stroke. But no skills are involved, since the computer decides every shot for you. Kids may enjoy the sound-and-light show, but we doubt that adults will.

Educational games

Of the eight educational games we looked at, five quiz a child on simple mathematics, two on spelling, and one on general information. Their teaching value depends on a couple of factors. One is design. The game has to be fun. A device that provides generous feedback, such as *Speak and Spell*, is more likely to hold a child's interest than one that occasionally winks a colored light. The attitude of parents and teachers toward these games is important, too. As with any other educational tool, a learning game can't be successful without encouragement and guidance from others.

Various staff members brought the games home for their children to play. The children ranged in age from 6 to 14. *Speak and Spell*, a toy that actually speaks, was far and away the most popular. (It's far and away the most expensive, too.) Children repeatedly wore out the batteries. There were fights over who would play with it next. The other spelling game, *Spelling B*, was also a hit.

The *Quiz Wiz* kept a family of three children, ages 9, 12, and 14, happy for several weeks. There are a variety of cassettes available for that game. We tried only one. After a while, the kids wanted to know if we could buy some others.

The mathematics games were less in demand. The simplest ones, lacking even a digital display, were the least popular.

All the games but the *Math Master* come with an inviting booklet that explains the game and gives variations for one or more players.

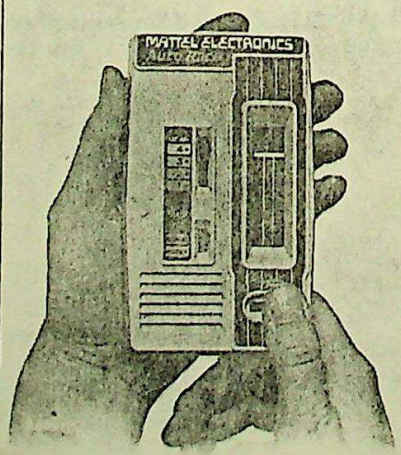
Mathematics

Coleco Lil Genius 2000, $10. "Ages 5 and up." 1 game for 1 player. Skill level depends on ability of user. Low energy cost. Lacks on/off indicator. Uses 9-volt battery. No warranty.

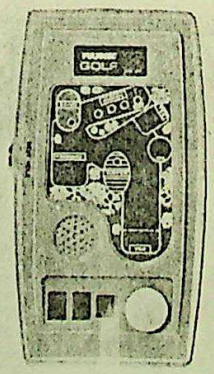
National Semiconductor Quiz Kid, $10. "Ages 5 and over." 1 game for 1 player. Skill level depends on ability of user. Lacks on/off indicator. Low energy cost. Uses 9-volt battery. Has jack for a-c adapter. 3-month warranty.

These two games are nothing more than answer-checkers. There is no digital display. Instead, *Lil Genius* has a freckled, bespectacled face and *Quiz Kid* has an

Mattel Auto Race



Pulsonic Electronic Golf



Quiz Kid

owl's face, each with one red and one green eye. When you punch in a problem and answer, the green eye flashes if you're right, or the red eye (and a buzzer on the *Lil Genius*) tells you you're wrong.

You can enter problems in addition, subtraction, multiplication, or division. With *Lil Genius*, you have to push three keys to find out if your answer is correct. Hit those keys in the wrong sequence, and the red light and buzzer go off. *Quiz Kid* needs only one key to get results. That game also allows slightly more sophisticated problems because it has a decimal key.

The major drawback to these games, we think, is that you can't look at a problem again to see what went wrong if the red light appears.

We think that most 5-year-olds, not to mention older children, would be happier creating their own games on a conventional $10 pocket calculator.

Epoch Math Master, $32. "Ages 5 and up." 3 games for 1 player. 2 skill levels. Low energy cost. Uses 2 AA batteries. 12-month warranty.

Math Master has a digital display, but its rather cut-and-dried approach to the subject of mathematics may not hold the interest of a child in the elementary grades. It offers problems at two levels of difficulty in addition, subtraction, multiplication, and division. Another option is problems presented in algebraic format, where you fill in a missing number on the left side of the equals sign. A third option is multiplication tables.

The game can be operated in two modes. If you choose the automatic mode, the *Master* gives you the right answer after you've given two wrong answers. In manual mode, you have to punch a key to get the answer.

The user chooses the type of problem and the mode. At the end of 10 problems, the display shows the number of problems presented, the number answered correctly on the first try, and the number answered correctly on the second (or further) try.

Texas Instruments Dataman, $22. "Ages 7 and up." 7 games for 1 player. Skill level depends on ability of user. Medium energy cost. Shuts off automatically if left unattended. Uses 9-volt battery. 12-month warranty.

Dataman presents its seven mathematical games in space-age splendor. You can create your own equations and answer them. *Dataman's* digital display gives you an "atomic light show" if your answer is right or E-E-E and an angry barrage of flashes if it's wrong. After two tries, the display gives the correct answer. When you've done 10 problems, *Dataman* tells you how many you answered correctly and presents another light show. The better the score, the longer the show.

The MEMORY BANK key allows one person to program and store problems for another person to answer. *Dataman* then gives the score and the time it took to complete the quiz. Turning the game off erases the memory.

Other keys provide multiplication tables and problems with missing factors. NUMBER GUESSER puts a mystery number (between 9 and 100) into *Dataman's* memory and gives clues to help figure out the number. When the player guesses the number, the display tells how many tries it took. Force Out and Wipe Out are games for two or more players; *Dataman* is passed around until someone is "out," rather like the schoolyard game of hot potato.

We think *Dataman* is the best of the mathematics games.

Texas Instruments Little Professor, $15. "Ages 5 and up." 1 game for 1 player. 4 skill levels. Low energy cost. Shuts off automatically if left unattended. Uses 9-volt battery. 12-month warranty.

Little Professor is similar to the *Math Master*. It has a digital display. You don't create your own equations on this one; it tests you in addition, subtraction, multiplication, and division.

You choose the level of difficulty and the type of arithmetic problem. You have three chances to answer each problem before the *Little Professor* gives you the answer. Each quiz consists of 10 problems. At the end of the set, the display flashes the number of problems you've answered correctly.

Spelling and facts

Coleco Quiz Wiz 2060, $25. "Ages 6 to adult." 1 game for 1 player. Skill level depends on ability of user. Tabletop model. Lacks on/off indicator. Low energy cost. Uses 9-volt battery. 3-month warranty.

This is a multiple-choice game. *Quiz Wiz* comes with a quiz booklet and an answer cartridge containing 1001 questions and answers on a variety of subjects. (Additional cartridges and quiz books cost about $7.)

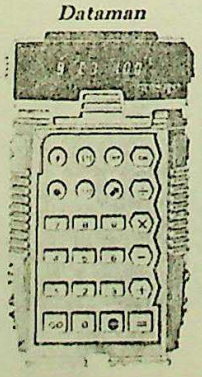
To play, you enter the number of any question and push answer key A, B, C, or D. If you're right, you get a beep and a green light. If you're wrong, a buzz sounds and a red light goes on. If you want to try again, you have to clear the machine and re-enter the question number and another answer. You have to clear the machine between each question, too. We found that annoying.

Questions on sports, movies, television, trivia, history, cartoons, words, and more have varying degrees of difficulty. A table of contents in the quiz book would have been helpful.

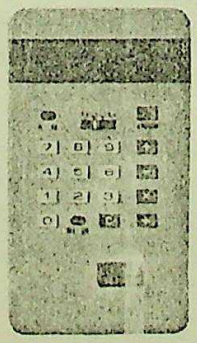
Texas Instruments Speak and Spell, $55. "Ages 7 and up." 5 games for 1 player. 4 skill levels. Medium energy cost. Shuts off automatically if left unattended. Uses 4 C batteries. 12-month warranty.

The most expensive of all the games we bought, *Speak and Spell* is unique in that it has a synthesized (though definitely human) voice. The voice is quite understandable. And it has quite a bit to say—a 236-word spelling vocabulary plus chit-chat in the basic unit. Additional vocabulary modules are available at extra cost. *Speak and Spell* has four levels of difficulty and five different games. In the

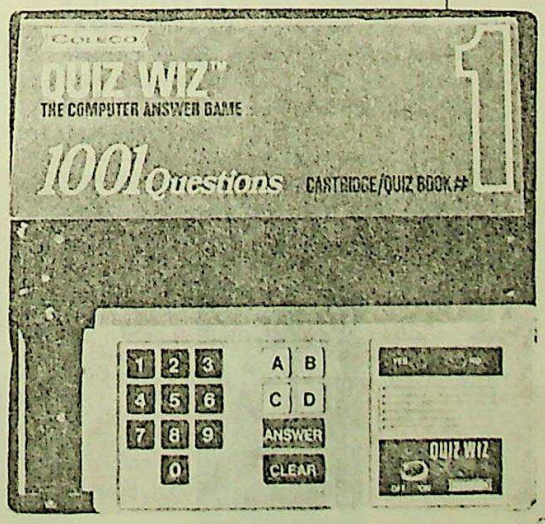
Dataman



Math Master



Quiz Wiz



basic game, the voice tells you to spell a word. As you spell it out on an alphabet keyboard, the voice repeats the letters pushed. After you press ENTER, the voice lavishes praise if you're right or says some variation of "try again" if you're wrong. At the end of each game, the display and voice tell you the score.

In another game, the display shows a word and the voice says, "Say it." Then the voice pronounces the word.

There are more special keys. MYSTERY WORD is like the paper-and-pencil game of hangman. The display shows dashes for the number of letters in the secret word. The player hits letter keys until he or she guesses the word. SECRET CODE codes and decodes words by alphabetic substitution. LETTER simply displays and pronounces randomly selected letters.

Texas Instruments Spelling B, $30. "Ages 6 and up." 5 games for 1 or 2 players. 3 skill levels. High energy cost. Shuts off automatically if left unattended. Uses 9-volt battery. 12-month warranty.

A picture book comes with this spelling game. When you push GO, a number appears on the display. You turn to that number in the booklet and spell out on the game's keyboard the name of the object pictured. A correct spelling puts RIGHT on the display. An incorrect spelling displays WRONG, and you get a second chance. If you're wrong again, the machine spells the word correctly and goes on to the next word. Each quiz of five words follows the pictures consecutively so you don't have to keep flipping pages in the book.

Spelling B has a 264-word vocabulary in three levels of difficulty.

Special keys include STARTS WITH (the user guesses the first letter of each word) and MISSING LETTER (dashes on the display indicate missing letters for the player to fill in). MYSTERY WORD is again a version of hangman. SCRAMBLE is for two players. One of them puts up to five words into the computer. The words reappear one at a time for the second player to unscramble.

Strategy games

Several electronic games are based on the old-fashioned pencil-and-paper games of mastermind or *Jotto,* where one player thinks of a multidigit number or a word, and the other player tries to guess it by using test numbers or words. After each try, you are told the number of correct digits or letters and the number of correct positions in the guess. In the electronic versions of the games, the computer thinks of the number or word, and one or two players do the guessing. The games all come with score pads to keep track of tries.

The children who played these games found the one game that uses words, *Scrabble Sensor,* more captivating than those that use numbers, perhaps because what's to be guessed is ordered rather than totally random.

With most of the games, if you give up trying to guess—too bad. Only the *Coleco Digits* and the *Invicta Master Mind* have a key that reveals the solution.

Another type of strategic skill is needed for the pair of blackjack games we looked at. Those games can be used to put your checkbook in order as well as to deal out the cards.

Coleco Digits 2050, $30. "Ages 8 to adult." 1 game for 1 player. 2 skill levels. High energy cost. Uses 9-volt battery. Has jack for a-c adapter. 3-month warranty.

Press CODE, and *Digit's* computer thinks up a four-digit number. If you choose skill-level one, the game uses only the digits 0 through 5. In skill-level two, all 10 digits are used.

For each guess, you press four numbers and TRY. The display tells you if any of the numbers are correct and whether they're in the right positions. Pressing GIVE UP unveils the mystery number. *Digits* doesn't keep track of how many attempts it takes to guess the number, but the score pad does. Best to play this one in the dark—the display is very hard to read in bright light.

Invicta Electronic Master Mind 5000, $20. "Ages 8 to adult." 1 game for 1 or 2 players. 3 skill levels. Low energy cost. Uses 2 AA batteries. Has jack for a-c adapter. No warranty.

The instructions (which require the use of a magnifying glass) say there are nine games. There's one. The level of difficulty depends on whether the secret number is three, four, or five digits. Another player can select the secret number, too. The display tells you how many numbers you've guessed correctly and how many are in the proper places. If you give up, FAIL gives the answer. And this game displays the number of tries it took to get the right answer.

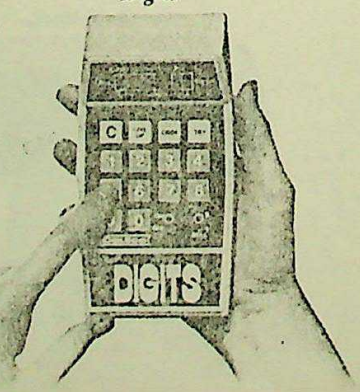
Milton Bradley Comp IV 4751, $23. "Ages 12 to adult." 1 game for 1 player. 3 skill levels. Tabletop model. Low energy cost. Uses 9-volt battery. 3-month warranty.

This game doesn't have a digital display. Instead, one column of lights tells you when you have the right numbers, and another when they're in the right places. The player can choose a mystery-number length of three to five digits. The R button tells the game to choose a mystery number, and E enters the guesses. *Comp IV* doesn't keep score. Flashing lights tell you when you've succeeded.

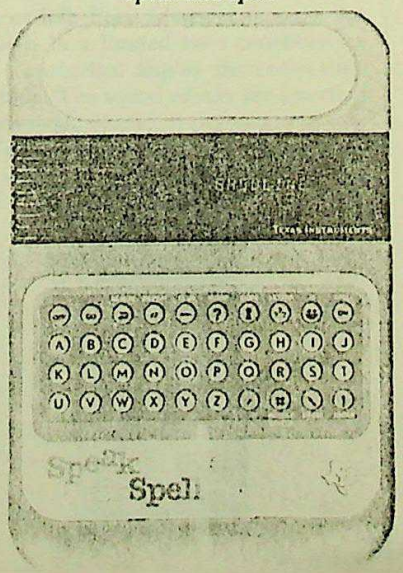
S&R Games Scrabble Sensor 47, $35. "Ages 7 to adult." 2 games for 1 or 2 players. 6 skill levels. Tabletop model. Low energy cost. Uses 9-volt battery. Has jack for a-c adapter. 3-month warranty.

Scrabble Sensor hides words instead of numbers. The alphabet part is on the key-

Digits



Speak and Spell



Electronic Master Mind

board, and the display is simply red lights that show the number of correct letters and positions in each guess. When one person plays, the game selects a four-letter word from its limited vocabulary of words dealing with outer space and rockets. When two people play, they enter secret words of up to seven letters for the other to decipher. *Scrabble Sensor* then becomes pretty much an electronic secretary to the proceedings of a *Jotto* match. The score sheets help in figuring out the words. We thought the game particularly entertaining for two players.

Tiger Think Tank 7440, $10. 1 game for 1 or 2 players. 1 skill level. Low energy cost. Uses 9-volt battery. Has jack for a-c adapter. Warranty covers parts for 12 months, labor for 3.

Players have to work harder at this game than they do with the others. *Think Tank* doesn't have a full keyboard, so if you want to enter the number 9, for example, you have to hit a key nine times. That's only part of the ritual. The R key sets the number. C lets you begin your guess. And NEXT lets you move along laboriously from digit to digit. CLUE makes the numbers disappear to reveal a code in the display that tells you if any of the numbers you've guessed are correct and if they're in the right place.

The display does keep track of the number of guesses, but the game's more work than it's worth.

Unisonic 21 Blackjack P1, $20. 2 games for 1 player. 1 skill level. High energy cost. Uses 3 AAA batteries. Has jack for a-c adapter. 3-month warranty.

Enterprex Blackjack BJ-21, $30. 2 games for 1 player. 1 skill level. Medium energy cost. Uses 3 AAA batteries. Has jack for a-c adapter. 3-month warranty for $3.

For those who want to hone their casino skills, these two pocket calculators double as blackjack dealers. Both choose cards from a 52-card deck in their memories, reshuffling after 38 cards are dealt. Their display shows digits for cards 2 to 9, A for an ace, and F for a face card. Both machines allow the standard blackjack ploys of splitting pairs, doubling, and insuring, and each scores the play by the book. Cumulative scores are shown at the press of a button.

To play, you enter a bet on the keyboard. After each deal, the *Enterprex* flashes the point total for dealer and player and shows the money you won or lost, which is helpful if you can't figure quickly in your head. It also lets you bet the same amount repeatedly without reentering the wager. The *Unisonic* doesn't have those niceties, but it lets you assign yourself an arbitrary beginning stake by entering some amount on the keyboard. Winnings and losses boost or reduce that stake. The *Unisonic* also lets the player "cut the cards" at each shuffle. Both machines came in a book-style case.

Target games

Bambino UFO Master Blaster ET201, $35. "Ages 5 to 80." 1 game for 1 person. 3 skill levels. Medium energy cost. Uses 4 AA batteries. Has jack for a-c adapter. 4-month warranty.

Mattel Electronics Space Alert 2448, $20. "Ages 8 to 80." 1 game for 1 person. 1 skill level. Low energy cost. Uses 9-volt battery. 3-month warranty.

These are similar target games that involve shooting "missiles" from one of three positions at the bottom of the screen. The goal is to hit "flying saucers" that appear at random from the top of the screen. The missiles can be controlled to some extent; if you get a hit, you score. If a saucer evades the missiles and hits the center of your base, the game ends. The higher on the screen a target is hit, the greater the score; a timer limits the game's length.

The well-designed *Bambino* has the most vivid action display we've seen short of video games. Its 70-odd fluorescent lights appear in the shapes of saucers, missiles, and explosion bursts. Its operating controls are also easier to use than those of the *Mattel* game.

Conic Destroyer 3101, $27. "Ages 7 and up." 1 game for 1 person. 1 skill level. Low energy cost. Uses 3 AA batteries. No warranty.

The *Destroyer* presents three ship channels on an illuminated screen. At the bottom of the screen, three red blips represent three ships in convoy; ahead of those is another blip representing a destroyer. The object of the game is to advance the convoy through the channels. Meanwhile, you must also protect the convoy from oncoming torpedoes, randomly fired, by interposing the destroyer between them. Buttons allow you to move the convoy forward and the destroyer right or left. Four advances through the channels in a limited time constitutes a win; a numerical display shows the time you took. The sound effects are assertive but musical.

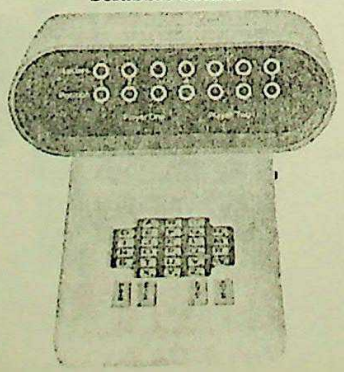
We found the *Destroyer's* push buttons sluggish in fast action. And the blips representing ships and torpedoes are identical, making them virtually indistinguishable when they're close together. Not as much fun as the *Bambino*.

Mattel Electronics Armor Battle 2938, $25. "Ages 8 to 80." 1 game for 1 player. 1 skill level. Low energy cost. Uses 9-volt battery. 3-month warranty.

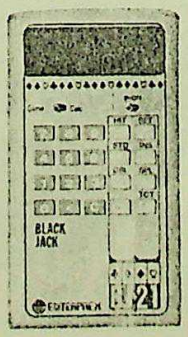
This game chooses random locations for the player and the target on a rectangular field divided by a grid into squares. Four buttons let you maneuver into position, one square at a time, to fire on the target. Meanwhile, you must also try to avoid invisible land mines.

Once you're in firing range, you have

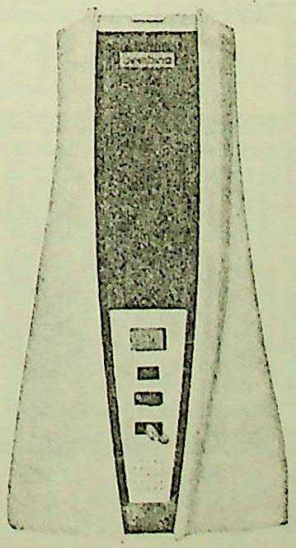
Scrabble Sensor



Enterprex Blackjack



UFO Master Blaster



three beeps before the target fires on you, so you must act fast. Striking a mine or being fired on by the target returns you to your starting position. An illuminated counter shows how many targets you've hit in the 99 seconds that is allowed for one round.

We found the explanation of how to fire a little vague, but we got the hang of it after a while. Sound effects include the tick of the timer, a siren that warns when you approach a mine, a short tune that indicates a target has been hit, another tune indicating time's up, and a warble that means you've been blown up.

Other games

Coleco Amaze-A-Tron 2010, $25. "Age 6 and up." 8 games for 1 to 2 players. 1 skill level. Tabletop model. Medium energy cost. Uses 9-volt battery. Has jack for a-c adapter. 3-month warranty.

We doubt many adults would find *Amaze-A-Tron* fascinating, but a number of 9- and 10-year-olds we tried it on judged it very enjoyable. *Amaze-A-Tron* presents a field of 25 numbers, arranged in a five-by-five square. You can select any of six two-player games as well as two forms of "solitaire."

All the games are based on a secret maze whose start and end are displayed digitally at the press of a button. You mark those points with two square plastic pieces, then try to decode the maze by moving plastic markers around the field. A correct move earns a little tune; a false move a harsh buzz. The intervals for each player's move are timed.

The mazes, of course, change with each game played. And some of the games are more challenging than others. We found the plastic playing pieces a bit awkward to use in two-player games, but that's only a minor drawback. When not in use, the pieces are housed in a recess on the underside of the set.

Coleco Zap 2030, $12. "Ages 5 and up." 1 game for 2 players. 1 skill level. Medium energy cost. Uses 9-volt battery. No warranty.

Zap is a sort of electronic Ping-Pong. Atop its oblong case is a serpentine course with a starting point at the center, a home base at each end, and two sets of numbered lights in between. A light zips back and forth on this path between players who must hit a button before the light reaches their base, or be "zapped."

The closer you let the light get to you, the faster it shoots back. Zap your opponent four more times than he or she zaps you, and you win. A fast-paced test of reaction time, *Zap* may eventually get boring. Still, one group of children kept returning to it between bouts with other toys.

Coleco Zodiac 2110, $41. "Ages 8 to adult." 3 games for 1 player. 1 skill level. Tabletop model. Low energy cost. Uses 2 9-volt batteries. Has jack for a-c adapter. 3-month warranty.

We wouldn't plan our lives around the information this game provides, but adults around CU's office found it quite entertaining. Children, generally, weren't enthralled.

Zodiac supplies three diversions. The first provides your basic horoscope. You find the code for your birthday in the accompanying booklet and punch that into the computer. Then you find and enter the proper time-zone number—a convenient but not very accurate description of your birthplace. Next, you put in the hour of your birth (if you don't know it, you can use midnight). With flashing lights and mysterious tones, *Zodiac* purportedly displays the position of the planets at the time of your birth. It then goes on to list personality characteristics by number. You look them up in the booklet.

Another mode is the daily preview. Want to know what November 29, 1984, holds in store? Ask *Zodiac*. You put in the date, the coded time zone, the time of day, and your birth-sign. The display responds with a number. Look it up and "see the future."

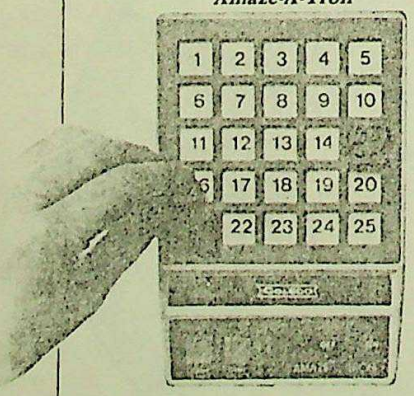
Advice is the third mode. The computer needs to know the date, place, birth sign, and the nature of the question (another code). The five display responses range from GO GO GO to NO GO.

If it weren't so tedious to look up all the codes, the game might be a good party pastime. But an astrologer we consulted said that *Zodiac*'s charts are sometimes inaccurate (due to lack of precision in birthplace) and do not even give the moon's position, which is important astrologically.

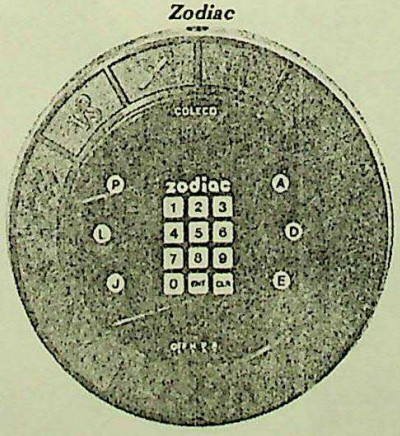
Ideal Maniac 3P1741, $45. "Ages 8 and up." 4 games for 1 to 4 players. 1 skill level. Tabletop model. Low energy cost. Uses 4 C batteries. 3-month warranty.

The heavily advertised *Maniac* is a square toy with a broad push-panel on each side and a small electronic display in the center. It poses four challenges, each of which is repeated three times in varying forms. The sequence or frequency of challenges cannot be changed. Challenge I is a musical-chair variation. In Challenge II, you count the notes in a short electronic tune. Challenge III's object is to match up a random pattern initially displayed with one of three subsequent ones. In Challenge IV, play-

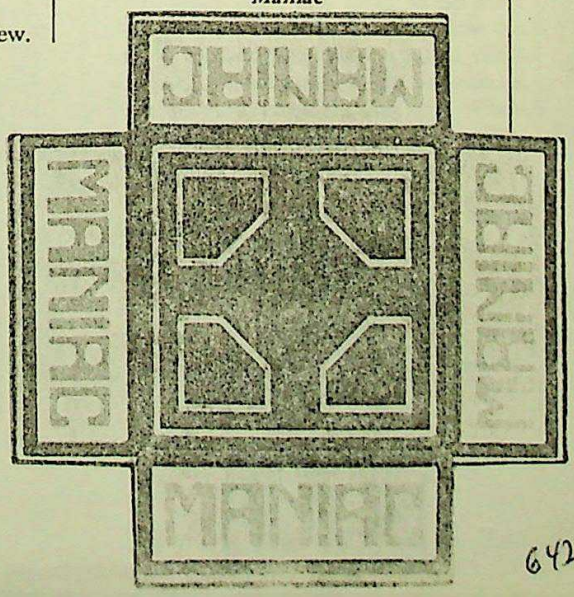
Amaze-A-Tron



Zodiac



Maniac



ers try to estimate the length of a tone played by *Maniac*.

The closer your response comes to meeting the challenge, the more points you score. You get two points if your timing is within one-quarter second or if your note-count is accurate. One point is your reward for responding within one-half second or one note. Outside those limits, you get zero. A win is 25 points. The game needs close attention, and background music or chatter is apt to prove annoying to players.

After each round, *Maniac* displays the cumulative score for each of four players—rather tedious if only one or two are playing. *Maniac* is also expensive, as these games go. Still, it's one of the few that entertained kids and adults equally.

Milton Bradley Simon 4850, $40. "Ages 8 and up." 3 games for 1 to 4 players. 4 skill levels. Tabletop model. Lacks on/off indicator. Low energy cost. Uses 1 9-volt and 2 D batteries. 3-month warranty.

Tiger Copy Cat 7520, $18. "Ages 5 through adult." 3 games for 1 to 4 players. 4 skill levels. Tabletop model. Lacks on/off indicator. Low energy cost. Uses 9-volt battery. 3-month warranty.

In the first game provided by both toys, a player matches a random sequence of musical notes by playing them on four broad push-panels of different colors. The game increases the number of notes in the sequence by one note each time until the player makes a mistake and gets a razzing. Four difficulty-levels extend the sequence from eight to 31 notes.

In a second game, you choose your own note sequence, adding a note and repeating the sequence over and over until a mistake is made. A third game, for two to four players, is essentially an elimination contest that parallels the first game. Children of several staffers loved the games—and so did several adults.

The *Copy Cat* seems ironically named; it's an almost direct knockoff of the popular, and considerably more expensive, *Simon*. There are some physical differences between the toys. *Simon* is about a foot in diameter and should be used on a tabletop. Its push-panels light up when pressed. *Copy Cat* is small enough to be hand-held, has small lights above its push-panels, and has sound effects rather less harmonious than *Simon's*. *Copy Cat's* price does make it seem attractive, but we think the contacts under its push-panels are not as safe from abuse as *Simon's*.

Parker Bros. Merlin 3200, $24. "Ages 7 and up." 6 games for 1 player. 1 skill level. Medium energy cost. Uses 6 AA batteries. Has jack for a-c adapter. 6-month warranty.

Merlin is shaped rather like a *Trimline* telephone. It has 11 numbered keys with a light in each and a speaker at one end. It plays six games: tic-tac-toe; Music Machine (you can teach it tunes of up to 48 notes); Echo (the player repeats a sequence of random notes); blackjack (but to 13, rather than 21); a pattern-logic game called Magic Square; and a variation of mastermind called Mindbender (the player must discover a mystery number of one to nine digits).

We found the blackjack game disappointing compared with the two others we tested. *Merlin* also proved easy to trap in tic-tac-toe. And the key numbers molded into the case are too small and uncontrasted to see easily. On the other hand, Mindbender proved about as challenging as the *Milton Bradley Comp IV*. And those of our testers with a musical bent—adults and kids—were delighted by the programmable music box of the Music Machine game.

On balance, we'd say all six games work well and are varied enough to hold a youngster's interest over the long term.

Tiger Rocket Pinball 7460, $30. "Ages 7 to adult." 1 game for 1 or 2 players. 7 skill levels. High energy cost. Uses 4 AA batteries. 3-month warranty.

Castle Kingpin 711, $20. "Ages 6 to adult." 1 game for 1 player. 1 skill level. Tabletop model. High energy cost. Uses 9-volt battery. 1-month warranty.

The common arcade game of pinball doesn't readily lend itself to electronic simulation. *Rocket Pinball*, however, makes a brave stab. Its ball is a red light that appears sequentially at various openings in the game board, sometimes unpredictably to simulate bounces off bumpers and flippers. The game keeps score for one or two players and works at increasing levels of difficulty. The levels can be chosen independently, so that an older child can be "handicapped" when playing against a younger one.

We found the game difficult to use in a brightly lit room and certainly not the equal of an arcade game. Still, it should provide some fun for young children (and it did, for the kids who tried it).

Though closer to its arcade counterpart, *Castle Kingpin*, we thought, pretty well fails as a pinball simulator. The *Kingpin* does have a real metal ball that rolls, a spring-driven launcher, and mechanical flippers. The trouble lies mainly in its electronic scorekeeper. Points are racked up as the ball rolls over flat numbers and stars, each worth various points. But the points don't add up; scores of 3 and 4 tend to be displayed as 34 rather than 7. It doesn't take much of that before the counter overflows and stops scoring—usually, in fact, before the game is over.

We have more reservations. The score, even when kept, has little to do with skill; points mount up no matter how the ball is flipped. And even a small child will soon realize that a single ball can be kept in play virtually forever: When both flippers are raised, the ball is effectively barred from the starting slot.

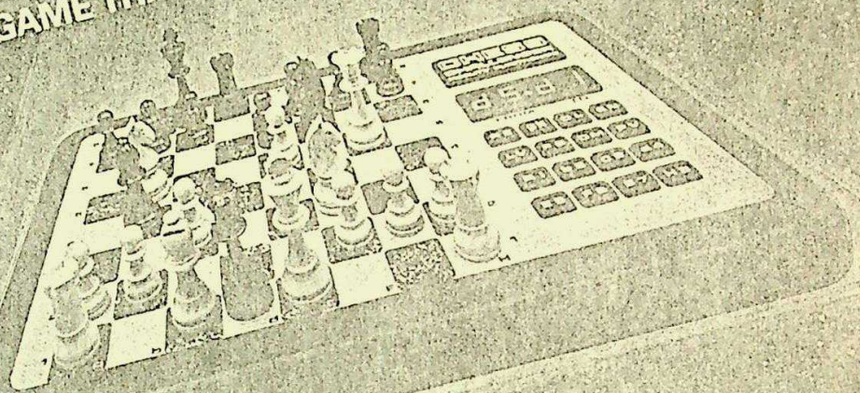
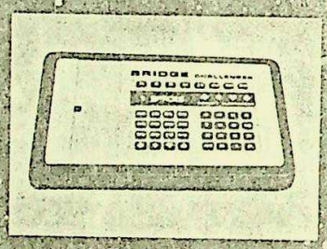
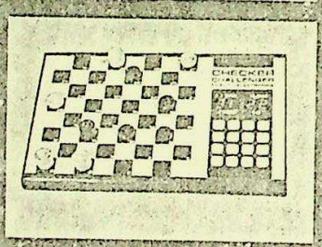
FIDELITY ELECTRONICS

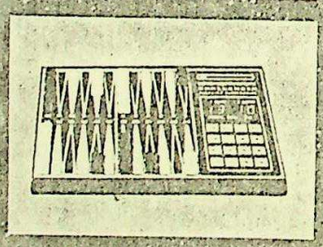
VOICE CHESS CHALLENGER®

THE FIRST THINKING GAME THAT SPEAKS TO YOU









A perfect chess opponent, the Challenger® can play against you at infinite levels of skill, from beginner to expert. And . . . it speaks to you . . . calling out all moves, catching errors and announcing game progression. The Challenger® is also a superb teacher and it will even suggest your best move. Be warned, however, that the Challenger® has 1200 classic book opening moves and can analyze over three million board positions stored in its tiny computer brain. So, it can be very tough. It is so sophisticated, it is available in either English, Spanish, German or French language.

Other challenging computer games from Fidelity include . . . BRIDGE . . . CHECKERS . . . and BACKGAMMON. At fine stores everywhere.

FIDELITY ELECTRONICS, LTD.
Miami, Florida 33178

The world's largest manufacturer of self-contained, microprocessor based, board games.

It's a computerized bridge club in a box!

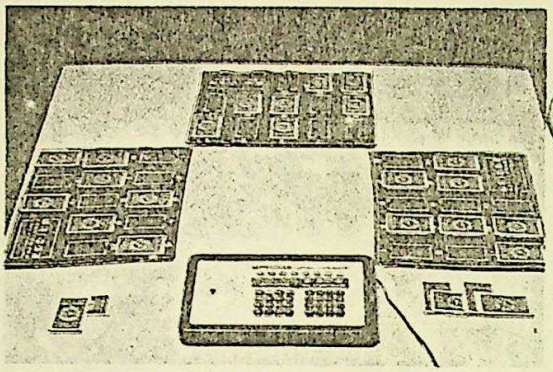
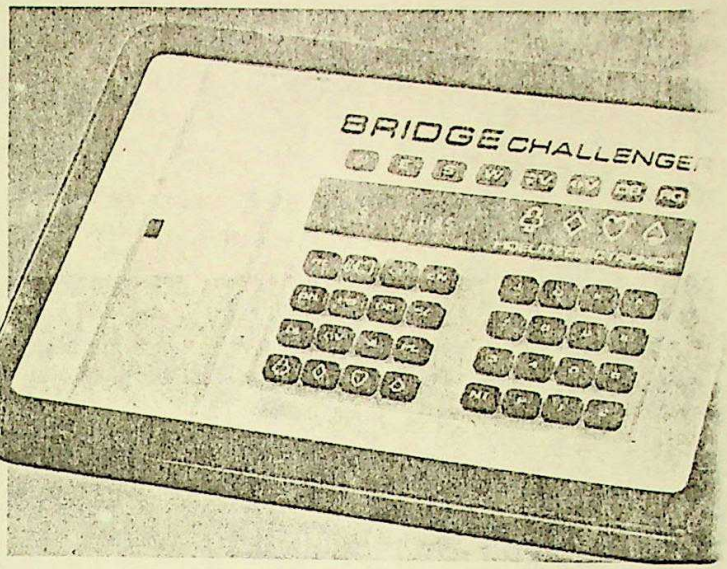
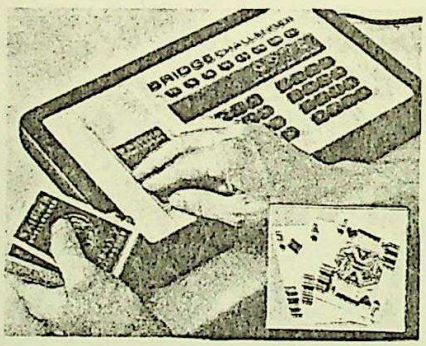
Sears XMAS CAT.

Built-in computer is so powerful
it lets this electronic marvel play bridge
as your partner, your opponents or both
. . . or you can watch how the game
"outsmarts" itself
in fully automatic play





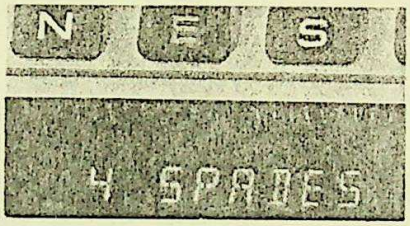
Need a fourth for bridge? Or a second, third and fourth? Or would you rather watch while four "others" play? Bridge Challenger® is always ready for a game, whether you're short a player or your bridge club is curious to see how a computer would have played their hands. Just tell the machine which positions to play (N, E, S, W), then deal out the custom cards as you normally would.



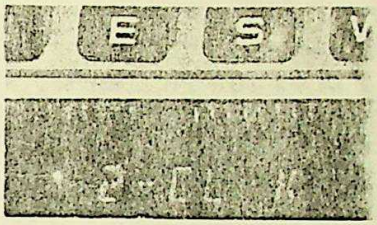
As each computerized player asks to see its hand, pass its cards—face down, one at a time—over the optical scanner and then place them in order on one of the three green felt playing fields provided.

In this manner, "everyone" sees only his own cards.

STAYMAN, GERBER AND BLACKWOOD PLUS SIX OTHERS



Bridge Challenger® automatically uses Stayman, Gerber and Blackwood. Assign each pair of partners one of the six additional conventions or variants that the machine knows: Preferred Minor, Strong Two Club and Weak One No-trump Openers, Jacoby Transfers, the Baron Convention and the possibility of specifying the strength of the 2NT reply following a suit opener. Follow your favorite conventions while entering your bids: the machine will automatically display its own bids on its turns, using the convention you selected for it. When bidding is completed, the screen displays the contract and play begins.



COMPUTERIZED DUPLICATE PLAY

Completing the contract does not have to end
You also have the option to replay the hand
designate any new combination of human ar
chine players for full duplicate play. And
wonder how the computer would have d
had bid "three no trump" instead of "two
just override the electronic player's bid and

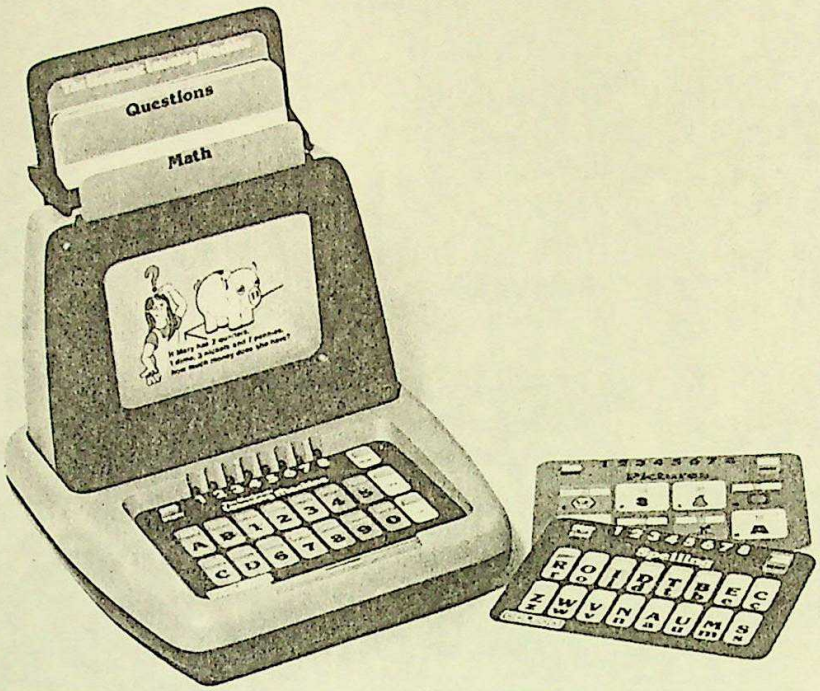
4 electronic games unleashed by Coleco



Electronic Learning Machine

HARTFORD, CONN. — Electronics are making the big news at Coleco. The new products are Electronic Learning Machine, Head-To-Head Electronic Soccer, Star Trek The Electronic Game, and Head-to-Head Electronic Baseball.

The Learning Machine takes more than 300 learning activities and makes them fun. It involves the child's sense of sight, sound, and touch. The machine comes with a starter pack including a cartridge and five learning programs.

With Electronic Soccer there's plenty of action on the field, whether you play offense or defense: against the computer, or an opponent.

There are two skill levels — semi-pro and pro.

The Star Trek Game pits the orbiting U.S.S. Enterprise vs. the V'ger in a two-player electronic space game.

By firing phasers at a desirable unclaimed world, each side attempts to neutralize it, and claim it for its own. The game also can be played by one person against the computer.

Electronic Baseball lets players manage opposing teams and the players have actual batting averages.

Throughout the game, LED lights show the ball coming down the pitch path and indicate the men on base while realistic electronic sounds accompany each action.

Licensed characters boost Carlin's lines

NEW YORK — Chairs, bop bags, and snow toys are generating the excitement at Carlin Playthings.

The TV Chair line has added such properties as The Amazing Spider-Man, The Incredible Hulk, Mighty Mouse, Mr. Spock, Twiki, and Raggedy Ann and Andy.

There are 10 new bop bags, each featuring a popular licensed character. Some of them are Spider-Man, Hulk, Buck Rogers, Bugs Bunny, and Mighty Mouse.

Snow Toys feature Spider-Man and Hulk and are molded in bright yellow, with the characters laminated in full color.

The Snow Toys include Sno-Disc, Sno-Sleds, Sno-Shovel, Sno-Mold, Sno-Shoes, and Slic-Sleds.

Varied marketing strategies key growth of

ELECTRONICS

Game manufacturers turn to TV, print promotion as category is deluged with product

By Mark Sullivan

It started with a beep, shipping $21 million worth of merchandise in 1977. The usually staid toy industry began to take notice of this electronic upstart easing its way into the toy department. In 1978 toy people had no choice but to notice. Electronics accounted for $112 million in manufacturer shipments, an increase of more than 500 percent. The electronics explosion had hit the toy department.

If 1978 was the explosion, then 1979 represented the proliferation. Electronics shipped $375 million worth of goods at the manufacturer level and sold 38 million units at the retail level, ringing cash registers to the tune of $782 million.

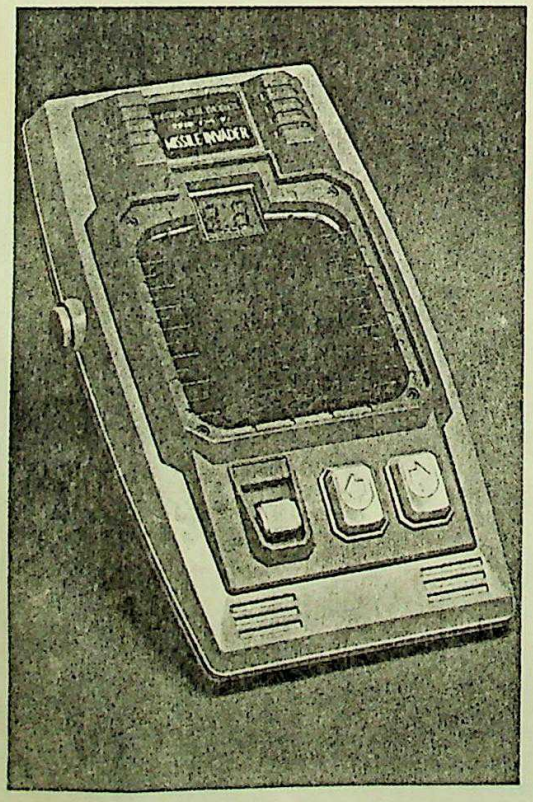
The beep that started it all had become a roar.

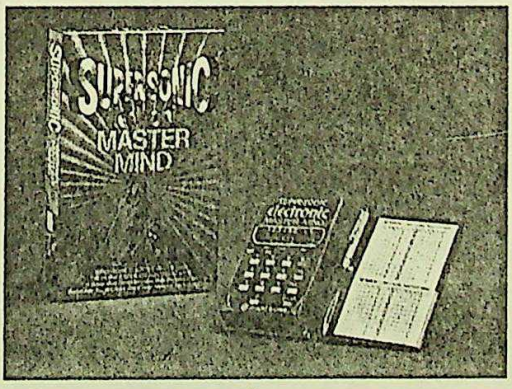
And in 1980, electronics shows no sign of letting up. Manufacturers have unveiled a dazzling array of new products: football games with half-time shows and victory songs, games that tell you when you're right and when you're wrong, even games that tell you to hurry up when you take too long between moves.

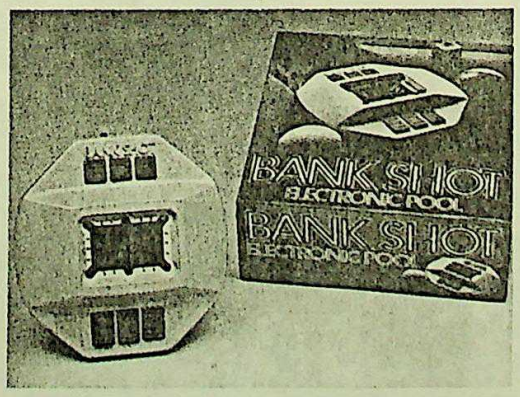
Out of an estimated 400 electronic items displayed at Toy Fair, nearly 300 were electronic games. Manufacturers who had previously never integrated a circuit were showing complete lines of electronic items. And buyers who thought 1979's explosion had made them veterans of the electronics war learned that it would not be easy to shop for electronics this year.

With the tremendous explosion of electronics has come the fallout as people at all levels of the industry try and get a handle (or at least a toehold) on the market.

One of the most significant developments to come out of the fallout is the increased emphasis on the marketing of electronic games. "Marketing is now as important as production," says George Ditomassi,







Far left, Bandai's Missile Invader is available in regular and "super" versions. Top right is Invicta's Supersonic Electronic Mastermind. The marketing of this game is aided by stellar packaging. Below right is Parker Brothers' Bank Shot electronic pool game.

Varied marketing strategies key growth of

By Mark Sullivan

It started with a beep, shipping $21 million worth of merchandise in 1977. The usually staid toy industry began to take notice of this electronic upstart easing its way into the toy department. In 1978 toy people had no choice but to notice. Electronics accounted for $112 million in manufacturer shipments, an increase of more than 500 percent. The electronics explosion had hit the toy department.

If 1978 was the explosion, then 1979 represented the proliferation. Electronics shipped $375 million worth of goods at the manufacturer level and sold 38 million units at the retail level, ringing cash registers to the tune of $782 million.

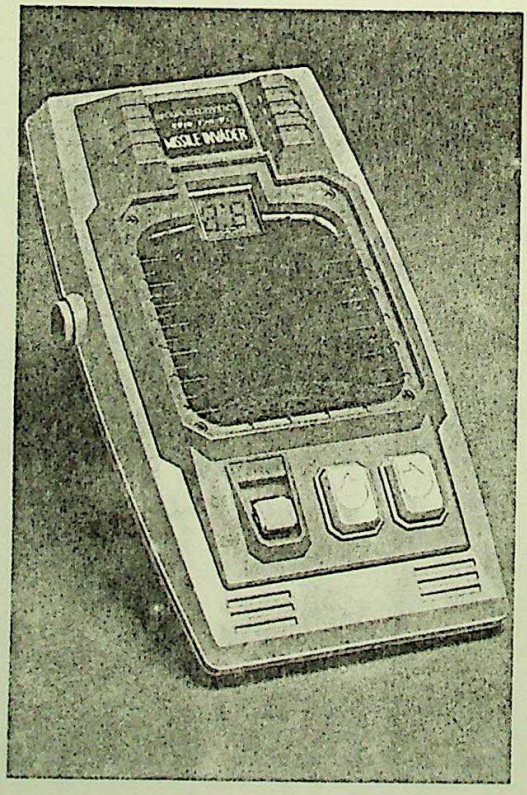
The beep that started it all had become a roar.

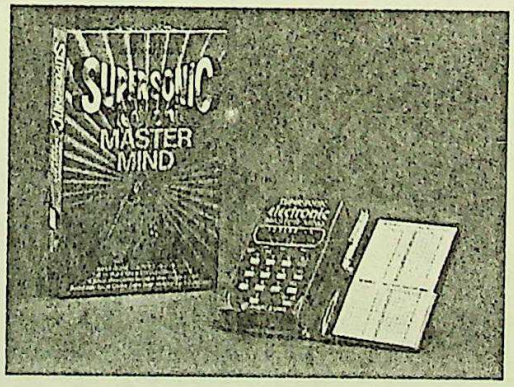
And in 1980, electronics shows no sign of letting up. Manufacturers have unveiled a dazzling array of new products: football games with halftime shows and victory songs, games that tell you when you're right and when you're wrong, even games that tell you to hurry up when you take too long between moves.

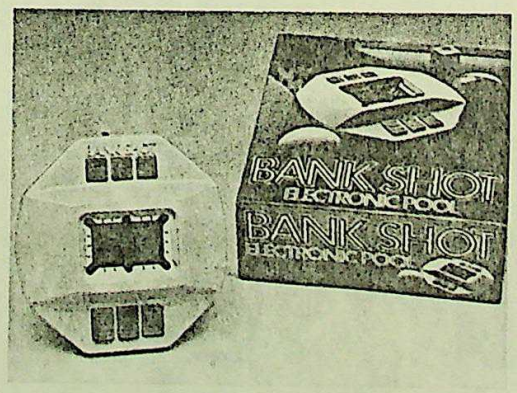
Out of an estimated 400 electronic items displayed at Toy Fair, nearly 300 were electronic games. Manufacturers who had previously never integrated a circuit were showing complete lines of electronic items. And buyers who thought 1979's explosion had made them veterans of the electronics war learned that it would not be easy to shop for electronics this year.

With the tremendous explosion of electronics has come the fallout as people at all levels of the industry try and get a handle (or at least a toehold) on the market.

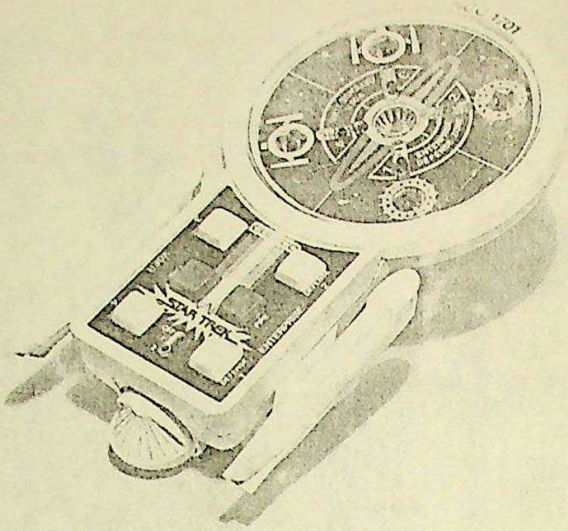
One of the most significant developments to come out of the fallout is the increased emphasis on the marketing of electronic games. "Marketing is now as important as production," says George Ditomassi,

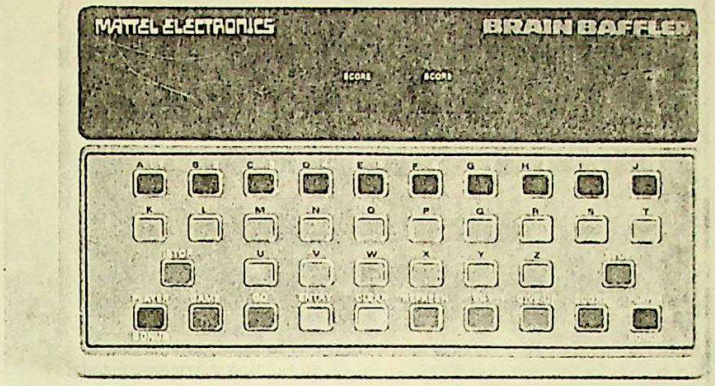


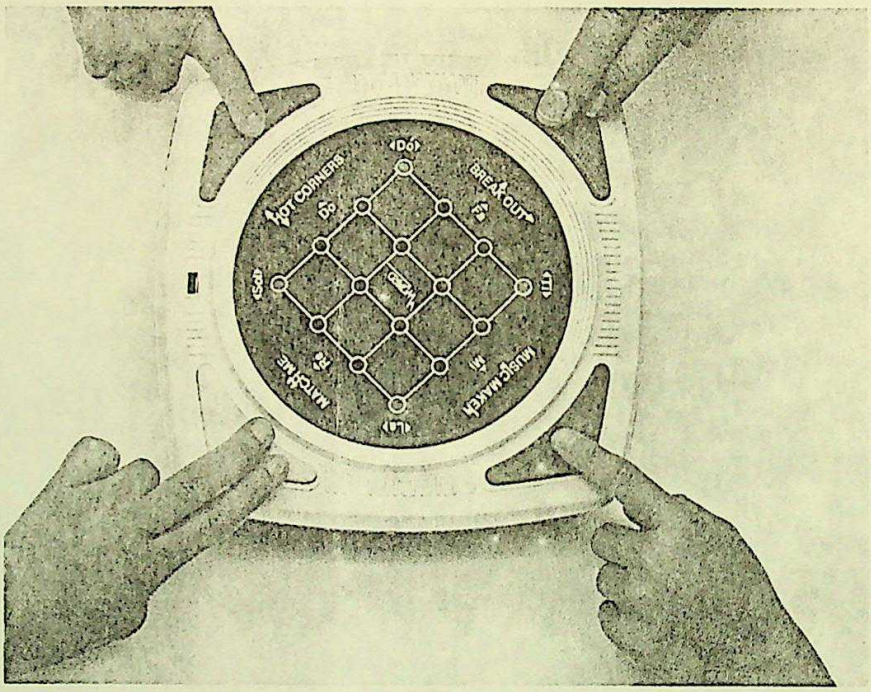




Far left, Bandai's Missile Invader is available in regular and "super" versions. Top right is Invicta's Supersonic Electronic Mastermind. The marketing of this game is aided by stellar packaging. Below right is Parker Brothers' Bank Shot electronic pool game.







Top left, Coleco's Star Trek chase game combines licensing, electronics and a retail price under $30. Above, Mattel's Brain Baffler plays several different word games and is for solitaire or two player fun. Left, Waddington's Wizzard will be the benefactor of a heavy TV ad campaign. Opposite page, top left, Entex's Tennis Game has adjustable levels of play. Opposite, top right, Milton Bradley's Pocket Simon is the company's offering at an "approachable price." Opposite page, bottom left, is Azrak Hamway's Baseball at a wholesale price under $20. Opposite page, bottom left, Mego's Fabulous Fred plays nine different games.

sumer advertising program, according to Tim Huber, vice-president marketing for the company's electronics division. Mattel also hopes to implement several promotions similar to last year's Baseball promo held in conjunction with Gillette. During World Series time, Mattel offered a $3 rebate on its electronic baseball game if a customer showed proof of purchase from the game and Gillette razor blades.

Ideal is also putting together a promotion campaign for its new entry into the electronics game category, The Generals. Ideal is setting up a nationwide tournament for players of the game. A similar tourney has been very successful in the Philippines, where the game originated. Ideal also plans heavy TV for its other electronic games. Joe Namath and Jim Palmer will star in a commercial for Flash, and Rocky Graziano will take a few on the chin in a commercial for KO the Champ.

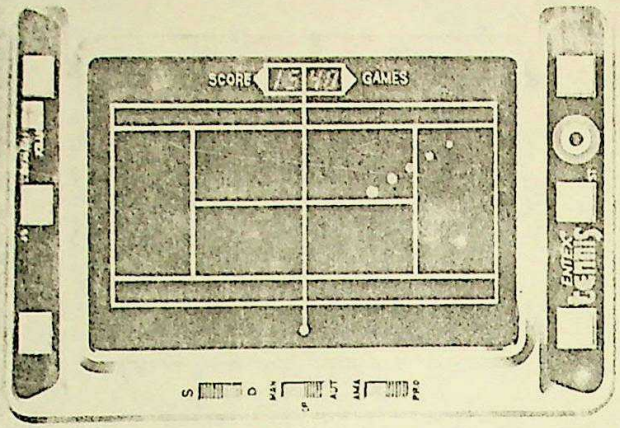
Another manufacturer of sports games, Tiger, is promoting its football game with full page ads in Pro Magazine, the official program sold at NFL football games. Tiger also plans spot TV in top 20 markets.

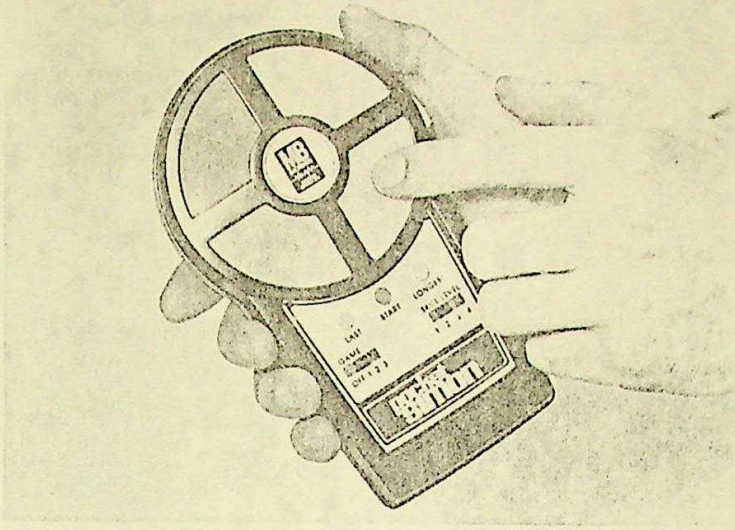
However, Tiger's print ad plan and similar plans formulated by many other manufacturers hit upon a sensitive issue in the promotion of electronic games: is print advertising more effective than television? "Print advertising is especially important in getting the adult market," says Ed Rivoir of Selchow and Righter, whose new Scrabble Brand Lexor is targeted at an adult audience. S&R plans an early print campaign to make an impression and then follow it up with TV in the fourth quarter.

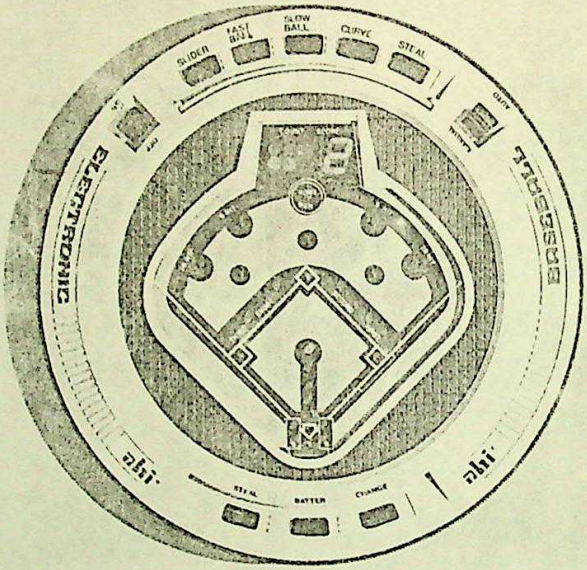
One company that is forsaking TV is Bandai America. "I haven't seen anyone who can fully demonstrate an electronic game and all its features in a 30 second TV commercial," says Andy Gatto of Bandai. "We're putting our money into posters and p-o-p displays."

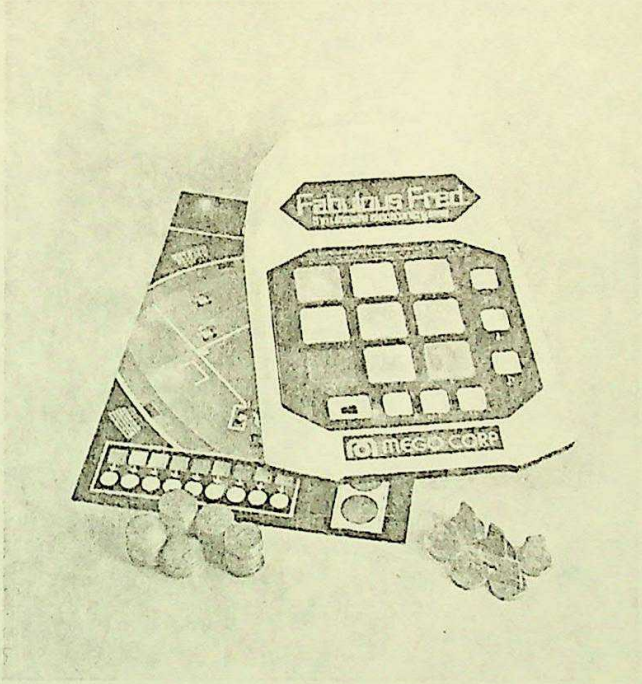
Another manufacturer who eschews television says that no TV advertising is actually a plus for the retailer. "With our games there's no TV and consequently no footballing of prices," he contends. "The retailer can get a full mark-up."

Jack Hirsch of Waddington Games, who is supporting his Wizard with $1.5 million worth of









TV advertising, says that TV can be an effective tool, but it should be used better. "It's a mistake to sell the technology — the nuts and bolts," he says. "You have to sell the fun of the game."

Whether a game is advertised on television or not, there are other ways for the medium to get the message across. Indicative of the new trends in marketing electronics, licensing is also making inroads in the category. Coleco is featuring a Star Trek chase game, while Bandai has Incredible Hulk and Spiderman games for children. Other licensed electronics include Castle's Name That Tune (from the TV show of the same name) and Marvel Superheroes pinall. Kenner was one of the first companies to combine licensing and electronics with the introduction of a Star Wars game last year.

Another critical marketing consideration mentioned by several manufacturers is price. Though the average price of an electronic game sold in 1979 was under $21 (see chart), it did represent an increase from 1978, and suggested retail prices on many items released for 1980 run upwards of $35.

However, some manufacturers are looking to keep some items at "approachable price points," according to Ditomassi of Milton Bradley. MB's Pocket Simon and Plus One, both new for 1980, have wholesale prices of $14.

Michael Katz of Coleco agrees that the best market will be in popularly priced games, though he estimates the cut-off price at the retail level will be around $50.

As marketing becomes more crucial, electronics manufacturers are even taking greater care with packaging. Barbara McDonald, the art director at LJN, reports that her company has revamped the packaging for its electronic games. "In the past, marketing and packaging have not been good," she says, "but I think you'll find companies looking to improve that area."

In fact, some companies, such as Invicta, have been conscious of packaging in the past. Invicta's Electronic MasterMind package was selected as Box of The Year by a design panel.

With the increased emphasis on packaging, there has also been a move towards p-o-p displays as manufacturers strive for placement and retailers look to make the most

Our electronic games are heavily promoted with award-winning commercials that are real "stoppers."

At the end of last year, many electronic games were still on the shelves of retail stores. Entex Electronic Games sold out.

This year, we have 15 games in our line. We brought out more new electronic games than any other company. We have the most sports games. The most two-player games. The most full-field games.

Entex Electronic Games are the ones you can depend on.

And you can bet your chips on that.

PLAYTHINGS 5/80 p.63

D21/48 Computer Design, June, 1980 p.21

may operate via its own control mechanism, from a simple point to point protocol-transparent link to a shared multipoint packet network. This powerful concept, coupled with the almost totally independent interconnect characteristics of broadband, generates a useful and flexible medium for local area networks. The approach allows implementation of other services simultaneously on the available spectrum. In Mitrenet, an example of such a system, the packet network coexists with security, television, and point to point data transmission.

Broadband coaxial cable makes a tremendous variety of services available to network architects and designers. Given the ability to assign channels and data circuit functions with relative independence, many multimode configurations are possible. The simplest application, an asynchronous point to point data link, may reside "right next door" to computer file shipping channels on the spectrum. In the aggregate, usage may grow from 30 to 40 full duplex services supporting point to point terminal applications, to a heavily loaded system supporting everything from timesharing to file shipping, with no wiring changes required in the main system. These networks provide complete data communications services, supporting literally thousands of local users, as well as interconnection into more conventional long haul data communications utilities.

Rather conveniently, the appearance of all signals on the same coaxial cable simplifies broadband network monitoring. Spectrum surveillance equipment is an important aid in the tasks of monitoring signal levels and detecting failures. Monitoring systems may contain a realtime minicomputer with resident data base which may monitor signals, command loopback functions, and operate remote test equipment to isolate faults. They may also monitor, on a polled basis, the status of repeater units. It is much simpler to monitor signals on one coaxial cable than it is to contend with a complexity of baseband coaxial cables or twisted pairs. Existing technical control systems are capable of generating remote system status displays and of suggesting fault diagnosis techniques to repair personnel.

Other attractions in the broadband arena include frequency agile modems, capable of manual or computer-driven slot assignments; virtual trunk telephone modems; multiple channel packet networks, in which the traffic is offloaded to alternate channels during peak activity periods; and user-controlled multiprocessor access through channel assignment. The continuing development of these techniques makes broadband an even more attractive alternative for data network implementation.

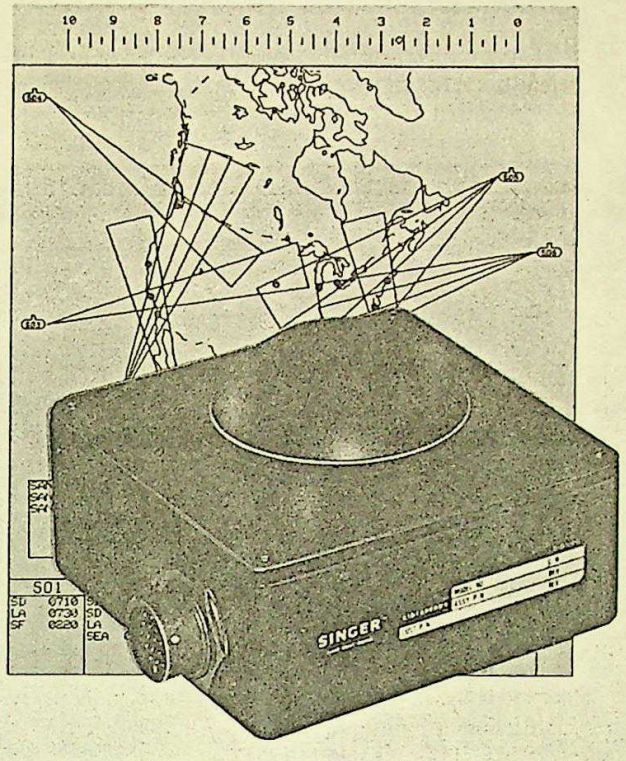
In next month's issue, Part 2 of this column discusses hardware components available for implementation of broadband local area networks.

Thinking CRT Cursor Control?



For Military or Rugged Industrial Applications

Librascope's Magnetic Trackball, with integral electronics, provides simultaneous X and Y scalar increments as inputs for digitally driven graphic displays, to position cursors, to add new data, or to modify existing data. Functions are generated by positioning two magnetic encoders with a hand driven ball to generate the orthogonal digital signals.

Designed for harsh environments, Librascope trackballs operate in the temperature range —55°F to +180°F and from sea level to an altitude of 50,000 feet. The unit complies with the environmental specifications of MIL-E-5272, Procedure 1 and MIL-T-5422.

Write or call for complete specifications. Librascope Division, The Singer Company, 833 Sonora Ave., Glendale, Calif. 91201. Telephone (213) 244-6541.

Librascope

a division of The SINGER Company

Librascope's magnetic encoders are the most reliable source of digital signals to represent a shaft angle. They offer long, maintenance free life in the harshest military or industrial environments. Output signals drive TTL integrated circuits directly. All models operate reliably in the temperature range —55°C to +125°C.

CIRCLE 14 ON INQUIRY CARD

Most manufacturers on time with first electronics shipments *continued from page 30*

product shipping, according to Don Nelson, director of national account sales.

Milton Bradley: Omni home entertainment center shown at Toy Fair has been dropped. There were some technical problems with the product and rather than proceed with limited production, the company has decided to push the product back to 1981. Super Simon and Pocket Simon are shipping now, Plus One should ship sometime this month, and Milton is scheduled to ship toward the end of July or the beginning of August.

Tiger: Ahead of schedule. Shipping all products offered at Toy Fair. Also, Tiger has decided to promote its Football and Playmaker Sports game on TV beginning Nov. 14 and running through Dec. 19. The ads will run in the top 30 markets.

Koala-T: Continued shipping on Mimic. On schedule with Fast on your Feet, Mini Match and Touch 'n' Hear Musical bear, all shipped in June. The Pet'ems musical plush bear should begin shipping this month, and the Multi Sport 7 game should be shipped in August. The Sound Saucer shown at Toy Fair has been dropped.

Bambino: On schedule with all items. "All promises we made at Toy Fair, we're keeping," says company spokesperson Debbie Sussan.

Entex: Ed Clewes, president of the company says the orders received so far this year were substantially larger than last year's. Consequently, he says Entex is a little behind schedule on shipments, but no more than a month.

Bandai: On time with all products. Began shipping in June as scheduled.

Mego: Invaders from Space, shown at Toy Fair, has been dropped from the line. The company has added the Time Out series to its line. The four different games, Toss Up, the Exterminator, Fireman, Fireman and Flag Man, feature a digital clock, digital scoring and two skill levels. Also, the series will be promoted on national TV. Fabulous Fred, a ten-in-one game is still in the line and should be shipped on time.

Parker Brothers: New items, Split Second and Bank Shot, will begin shipping in July and August. Also, Wildfire, an electronic pinball game, which was to be shipped last year, will begin shipping this summer with the other games. Parker has also stepped up its scheduled promotional campaign for its electronic lines. The company has slated a print campaign aimed at mothers, which will run in women's magazines beginning in August. Parker's electronics will also be promoted on network TV in prime time and kiddie slots.

Mattel: Not available for comment at presstime.

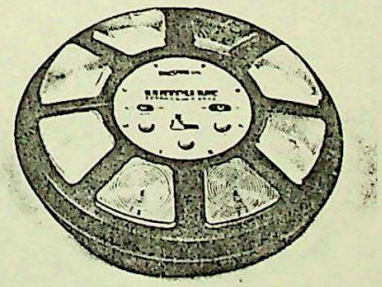
Kingsford strikes a Match



Kingsford's tabletop Match Me

NEW YORK — Kingsford Ltd. has shattered the stereotype of only one on a match. The company has released two versions of its Match Me game, a tabletop size and a pocket size.

Match Me is a light and sound game which also functions as an electronic organ. The game can be processed to remember up to 32 notes. Both sizes of the Match Me game can play four games, with two different skill levels. Also, both games have suggested retail prices of under $30.

Fun for the Entire Family

NEW

BANDAI Missile Invader

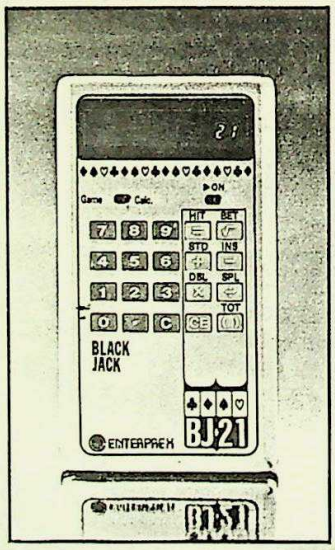
Your moon base is under attack! Missiles are coming at you from all directions! You dodge, evade, and return fire on the fearsome invaders. This time you've won—next time, who knows? Bandai's Missile Invader is great fun for kids and grownups alike; flashing lights and electronic sounds add to the excitement. You won't want to put it down! #BANINVD (3 lbs) **$24.95;**
Uses 9-volt battery #ER9VOLT (1 lb) $1.75 or #DS6908 Adapter (2 lbs) $6.95.

BANDAI Flightime

Imagine yourself as the pilot of a small plane. The sky around you is alive with other aircraft—crisscrossing and zigzagging through your airspace. You must guide your plane safely through the crowded airlanes. The craftier you are, the more points you can total; if you hit another plane, points are deducted. Flightime is a challenging test of your evasive skills, the risks increasing as the game progresses. Excellent for ages 7 and up.
#BAN8008 (3 lbs) **$34.95;**
Requires 4 #ERAA Batteries (2/pkg; 1 lb/pkg) $1.75/pkg.

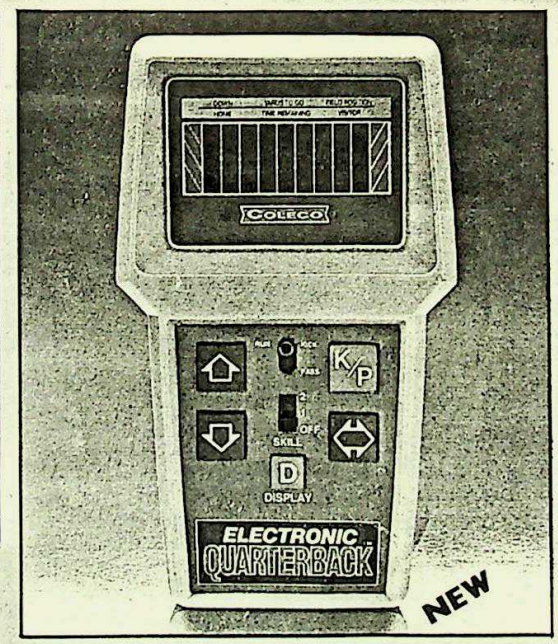
BANDAI Racetime

Road-racing demands split-second timing and total concentration–do you have what it takes? The Racetime electronic game offers a chance to prove it. The giant-size screen provides genuine road-racing thrills, right in the palm of your hand! "Real image" racers weave in and out in a challenging traffic pattern as you, the driver, attempt to maneuver your way through. If you crash, back you go to the starting point! The goal: drive as many miles as you can in the allotted time span. For ages 8 and up. #BAN8007 (3 lbs) **$34.95;**
Requires 4 #ERAA Batteries (2/pkg; 1 lb/pkg) $1.75/pkg.



Portable Blackjack

Comes in handsome wallet case. Includes 12-digit display, 10-digit junior slide rule calculator, parenthesis, simultaneous dealer/player display, automatic display of deck shuffle and accounting for bet, black jack, win, loss, split, insurance and double. Follows regular casino rules.
#ENBJ21 (3 lbs) **$24.95;**
Uses 3 "AAA" batteries #ERAAA 2/pkg (1 lb/pkg) $1.75/pkg.

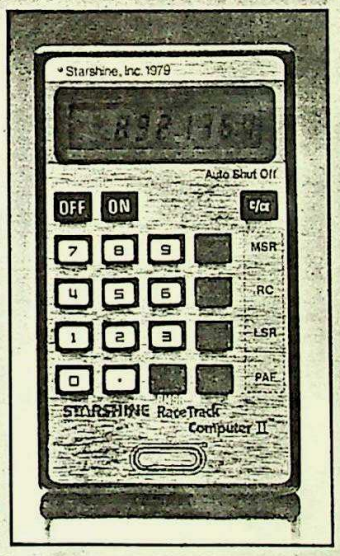


NEW

COLECO Electronic Quarterback

Computer Football in Your Hand

All the excitement of a real football game, contained in one hand-held unit. The computer controls the defense; you control the offense. Open holes in the defense with your blockers; set up a fast pass-play with your downfield receiver. Blocking, passing, running and kicking options are yours to command. Game even includes sound effects: referee whistles, and a victory song that's played when a touchdown is scored! Two levels of skill (semi-pro and pro); LED displays of time, score, downs, yards-to-go and field position. #COL2020 (3 lbs) **$34.95;** Requires #ER9VOLT Battery (1 lb) $1.75 or #DS6908 9-volt adapter (2 lbs) $6.95.



RaceTrack Computer II NEW

This exciting new calculator provides accurate ratings based on past performance data, then identifies and projects the real contenders. No handicapping knowledge required—RaceTrack Computer II figures performance rating instantly, even adjusts for varying track lengths. The horses with the highest ratings are most likely to win. Comes with handsome carrying case.
#RACE2 (3 lbs) **$29.95.**

SEARS TOYS CAT

Remote control pitching unit for (1)

(1) Electronic Baseball. You can be the batter, or try your hand as a big league pitcher and show off your fastball. 5 different pitches: if you're playing alone, use "computer" pitcher; or with another player, pitch fastballs, changeups, curves, sliders or knucklers. Remote control pitching unit lets you conceal your pitching strategy. LED readout keeps track of all balls, strikes, outs, base runners and score. You'll see flashing lights and hear a different sound on every play. Watch the players "run" around the diamond on a hit. Once you've hit the ball, computer decides if you'll score. No TV set needed. Includes scoring sheets, instr.
CONSTR: Plastic. Measures 8¾x6¼x1¼ in. high.
FOR AGES: 6 years to adult.
ORDER INFO: Uses 3 "AA" batteries, not included; (order packages below). Warranted by Entex Industries; for free copy, see page 322.
49 TH 62275—Shipping weight 1 lb. 4 oz. $28.47
Package of 2 "AA" Alkaline Batteries
49 C 46819—Shipping weight 2 oz. ..... Pkg. $1.19
Package of 2 "C" Alkaline Batteries
49 C 46839—Shipping weight 5 oz. ..... Pkg. $1.39

(2 and 3) Electronic Hockey and Soccer. Hand-held electronic games let you play against another player or computer on the ice or playing field. You control the offense by moving puck or ball down field, setting up shot, then shooting. Your opponent or the computer attempts to block or intercept puck or ball on defense. Blips of light represent each player and blinking light blip the puck or ball. Both games feature special electronic sound effects, LED position indicators, digital scoring, automatic timing, 4 direction keys and shoot button.
CONSTRUCTION: Plastic, each 8¾x5¼x1¾ inches high.
FOR AGES: 6 years to adult.
ORDERING INFORMATION: Each uses 3 "AA" batteries, not included (order packages at left). Warranted by Entex Industries, Inc.; for free copy, see page 322.

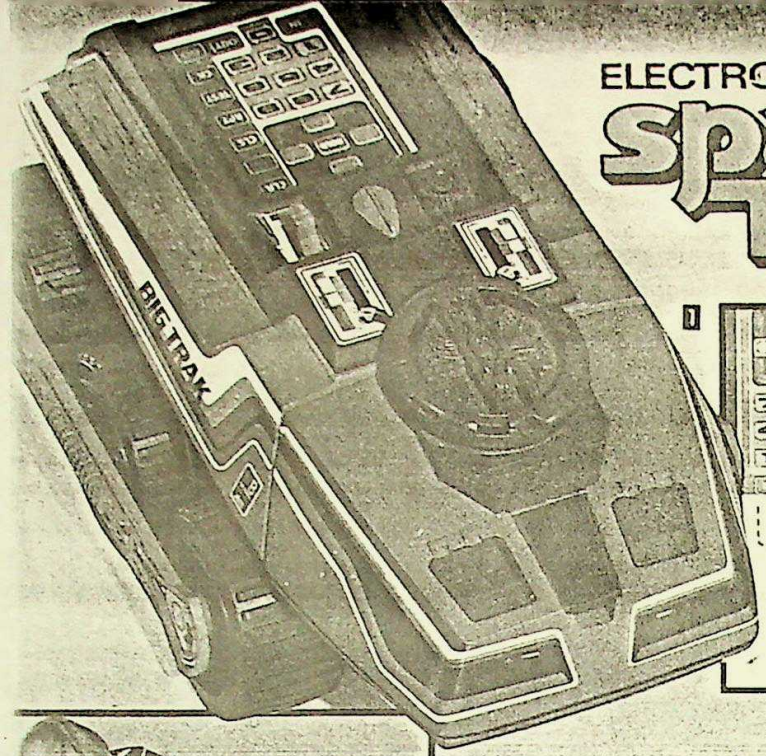
(2) Electronic Hockey Game
49 TH 65777—Wt. 1 lb. 7 oz. $29.97

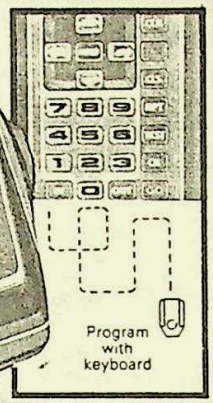
(3) Electronic Soccer Game
49 TH 65779—Wt. 1 lb. 7 oz. $29.97

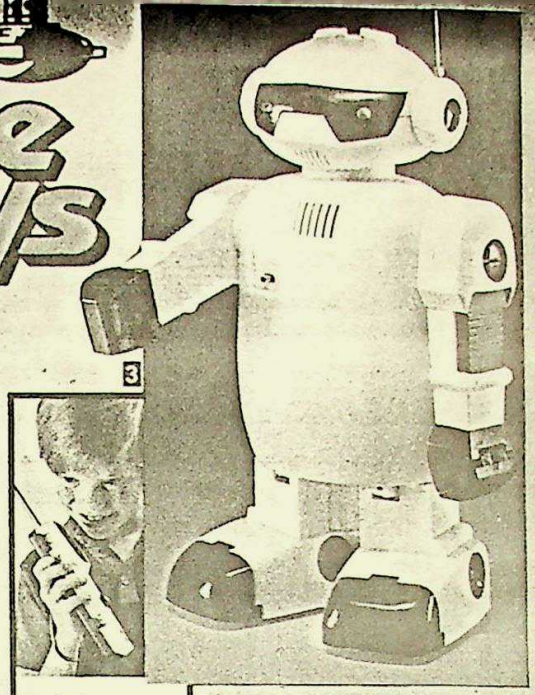
(4) Digital Diamond. A push-button 2-player baseball game. Pitcher can throw fastball or curve, batter can hit or miss. If it's a hit, digital light goes into field. The fielder-pitcher then pushes button to see if it's a single, double, triple, out or home run! Scoreboard registers score, men on base, balls, strikes, outs. No TV set needed.
CONSTR: Plastic, 8¾x6x2½ inches high.
FOR AGES: 6 years to adult.
ORDERING INFO: Uses 2 "AA" batteries, not included (order package at left).
49 TH 65043—Shipping weight 1 lb. .. $11.99

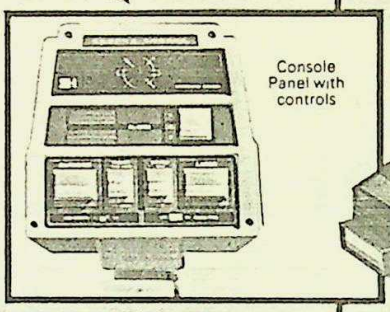
(5) Digital Derby Auto Raceway. How many laps can you race before time runs out? Steer, shift, race against other drivers but if you crash, the alarm flashes and costs you laps.
CONSTR: Plastic, 8¾x6x2½ in. Lap counter, reset button, automatic timer. For 1 player.
FOR AGES: 6 years and up.
ORDERING INFO: Uses 2 "C" batteries, not included (order package at left).
49 TH 62006—Wt. 1 lb. 3 oz. $14.27

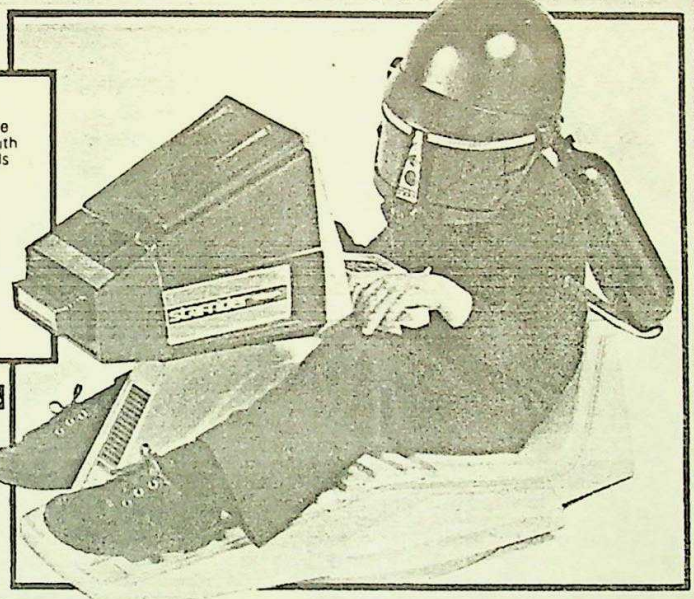
ELECTRONIC space Toys

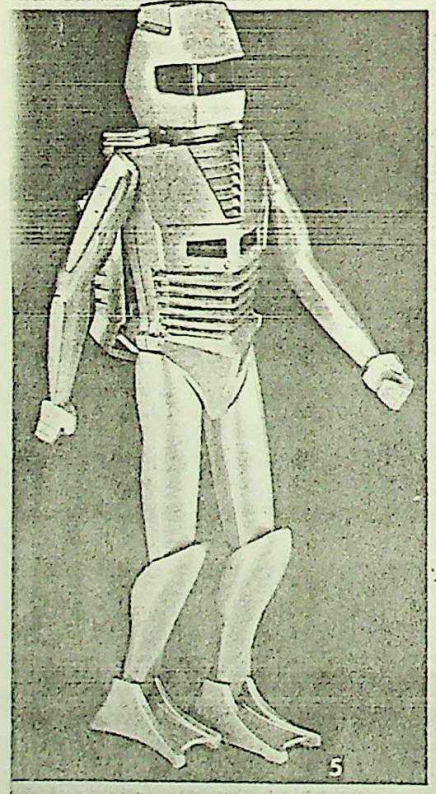


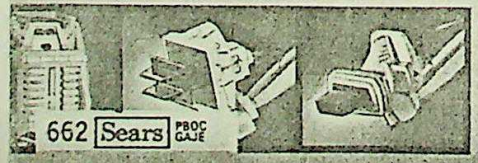












NOTE: Items (1), (3), (4) and (5) warranted by manufacturer. To write for free copy, see page 322.

SEARS TOYS 1980

(1) Milton Bradley's Big Trak™
Send Big Trak over lunar landscapes in search of moon monsters: then stun them with your laser. Program the Big Trak space vehicle to go forward, backward, turn left and right, rotate 360° and even fire laser guns! Big Trak can also be programmed for Big Trak Transport Trailer (not incl., sold below).
CONSTR: Plastic, metal, 13x8⅞x6 in. high.
AGES, ORDER INFO: 8 years to adult. Requires 9-v. battery, 4 "D" batteries (not incl., order at right).
49 TH 58289—Shpg. wt. 4 lbs. 11 oz. **$31.97**

(2) Milton Bradley's Big Trak™ Transporter Trailer
Haul interstellar equipment in the Big Trak Transporter Trailer attached to the Big Trak (not included, sold above). Can be programmed by Big Trak to dump automatically.
CONSTR: Plastic, metal. 17⅝x8⅝x7 in. high.
FOR AGES, ORDER INFO: 8 years to adult. Requires "D" battery (not incl.; order package at right).
49 TH 58287—Shpg. wt. 3 lbs. 11 oz. **$10.97**

(3) Mattel's Sir Galaxy™ Radio Control Robot
Sir Galaxy walks, talks, turns right or left, flashes his eyes and makes cosmic sounds at your command! Hand-held radio control transmitter doubles as a walkie-talkie; lets you project your voice thru robot for two-way conversation.
CONSTRUCTION: Plastic, 14 inches tall. Arms pose; hands grasp objects.
AGES, ORD. INFO: 5 yrs. to adult. Requires 3 "D" batteries, two 9-v. batt. (not incl.; order at right).
49 TH 58556—Shpg. wt. 5 lbs. 4 oz. **$64.97**

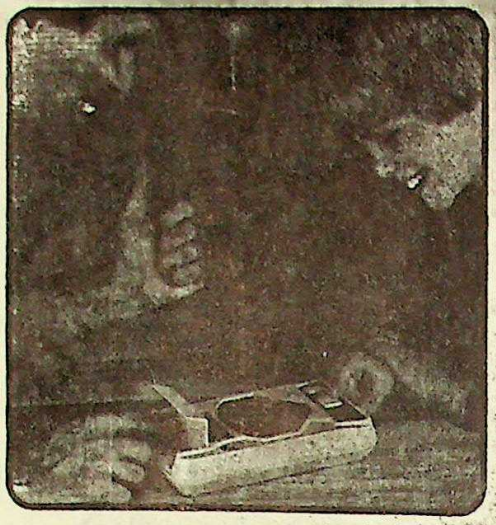
(4) Playskool's Star Rider™ Space Vehicle
Star Rider has all the controls, switches, visual and sound effects to transport a child to the outermost galaxies. Child controls Star Rider completely: using volume control switch for sound control; flipping buttons for "rocket boosters," "laser weapon," "explosion hit," "warp drive," and "emergency." Star Rider pivots 360°, has comfortable "astronaut seat."
CONSTR: Plastic, 30 3/16x16⅛x20 in. high.
AGES, ORDER INFO: 3 to 9 yrs. Requires 2 "D" batteries, 9-v. battery (not incl.; order below). Partly assembled. Instructions incl. Astro Explorer Play Set shown on child is not included, order on page 621.
Shipping weight 16 pounds.
79 TH 87239L. **$48.88**

(5) Parker Brothers ROM™ . . . the Space Knight
ROM has micro-electronic circuitry that enables him to scan the area with lighted eyes, "breathe" realistically from his respirator and make lights flash and sounds with his Energy Analyzer. Includes 3 detachable electronic accessories with light and sound effects; Rocket Pods, Translator and Neutralizer.
CONSTRUCTION: Plastic with flexible joints. 14 inches tall.
FOR AGES, ORDER INFO: 6 yrs. and up. Requires 9-v. battery (not incl.; order below).
49 TH 58121—Shpg. wt. 1 lb. 8 oz. **$18.97**

DieHard Alkaline "D" Batteries. Package of 2.
49 C 46849—Shipping weight 10 oz. . . . Pkg. **$1.59**

DieHard Alkaline 9-volt Battery.
49 C 46859—Shipping weight 2 oz. . . . Each **$1.49**

SEARS XMAS CAT. 1980



These 2-player

electronic Sports games

let you and your opponent play at the same time

All have both DEFENSE and OFFENSE controls and "players" are so maneuverable you can simulate the exciting, realistic action of your favorite real-live sports game

Your choice **$29.95** without batteries

- Play against a friend or the computer . . . . develop offensive and defensive strategies
- Realistic electronic sounds add to the excitement
- LED readouts display all the game action

(1) Team Play Basketball. *Was $37.95 in our 1980 "J" Summer Book, page 238.* Five offensive players pass the ball, setting up to shoot a basket before the clock runs out. Shoot jump shots or pass inside for a lay-up. Defense can block and rebound. LED display shows score, time remaining and "24-second" countdown. 2 skill levels.
CONSTR: Solid-state, plastic case. 9¼x3¾x1⅜ in.
FOR AGES: 8 years to adult.
ORDER INFO: Requires one 9-v. battery or AC adapter, not included, order at right. Warranty on facing page.
49 N 65683—Shipping weight 9 ounces $29.95

(2) Team Play Hockey. *Was $37.95 in our 1980 "J" Summer Book, page 238.* 5 player offense passes puck, setting up wingmen or center for a shot. Defensive player and goalie block shots and rebound. LED score, time, countdown. 2 skill levels add to the excitement.
CONSTR: Solid-state, plastic case. 9¼x3¾x1⅜ in.
FOR AGES: 8 years to adult.
ORDERING INFO: Requires one 9-volt battery or AC adapter, not incl., order at right. Warranty, facing page.
49 N 65684—Shipping weight 9 ounces $29.95

(3) Team Play Soccer. 5-player offense passes ball, setting up team mates for a shot at goal. Defensive player and 5-position moveable goalie block shots and take the ball on the rebound. LED display shows score and time remaning in game. 2 skill levels add to the excitement.
CONSTR: Solid-state, plastic case. 9¼x3¾x1⅜ in.
FOR AGES: 8 years to adult.
ORDER INFO: Requires one 9-v. battery or AC adapter, not included, order at right. See warranty on facing page.
49 N 65685—Shipping weight 9 ounces $29.95

(4) Offense/Defense Baseball. Human or computer pitcher can throw fastballs, changeups, curves, sliders or knucklers. Batter can steal bases or score with a sacrifice fly. Hit the ball for a home run, triple, double, single, outfield fly or infield out. LED display shows score, balls, strikes, outs and base runners. Score sheet incl.
CONSTR: Solid-state, plastic case. 8¾x6¼x1¼ in.
FOR AGES: 6 years to adult.
ORDER INFO: Requires 3 "AA" batteries or AC adapter, not included, order at right. Warranty on facing page.
49 N 65094—Shipping weight 1 pound 4 ounces . . $29.95

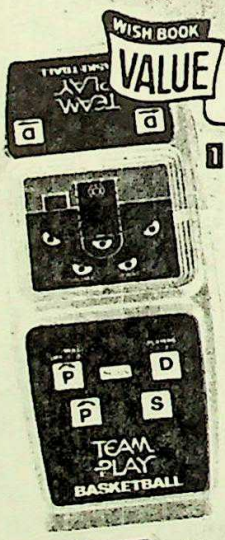
AC Adapter for (1 thru 3) and Football game, facing page
ELECTRICAL INFO: UL listed. 9-volt battery clip tip included. 110–120-volt. 60-Hertz AC. 6-ft. cord. Not for children under 8 years.
49 N 65244—Wt. 6 oz. $5.89

AC Adapter for (4) (not shown). Insert adapter plug into game jack and plug wall pack into 110–120-volt wall outlet. No batteries are required when adapter is used.
ELECTRICAL INFO: UL listed. 110–120-volts. 60-Hertz. AC. 7½-ft. cord. Not for children under 8 years.
49 N 65103—Wt. 5 oz. $5.89

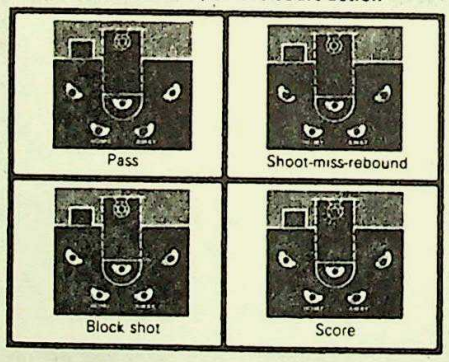
Alkaline 9-volt DieHard Battery
49 N 30949—Wt. 2 oz. . Each $1.99

Alkaline "AA" DieHard Batteries
Package of 2.
49 N 30909—Wt. 2 oz. . Pkg. $1.69

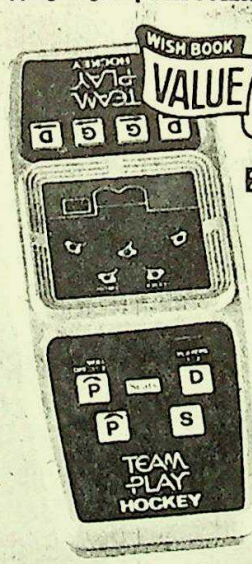
WISH BOOK VALUE **Cut $8** Team Play Basketball



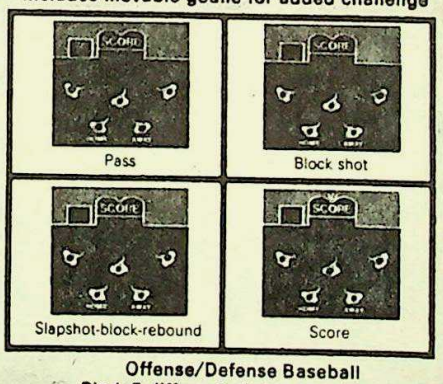
1 For authentic, on-the-court action

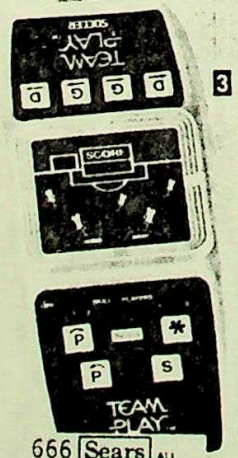


WISH BOOK VALUE **Cut $8** Team Play Hockey

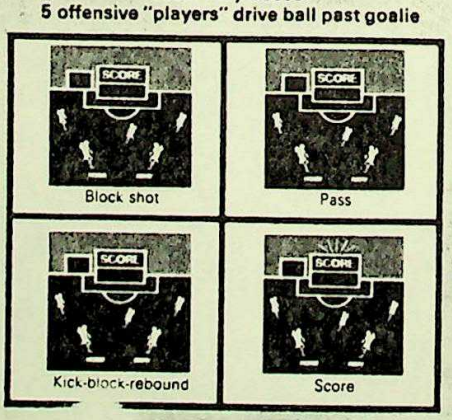


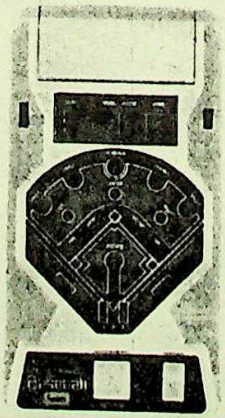
2 Includes movable goalie for added challenge



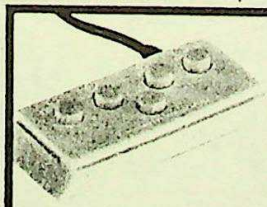


3 Team Play Soccer
5 offensive "players" drive ball past goalie

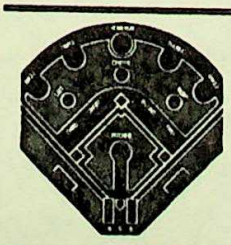




4 Offense/Defense Baseball
Pitch 5 different pitches, steal bases



Remote control prevents opponent from seeing your strategic pitches



Watch the game action and keep track of runners on authentic LED playing field

Tiger roars into action with computer games

MUNDELEIN, ILL. — Tiger Electronic Toys announced it will add several computer games to its line including talking-learning computers, and sports games offered for all ages.

Among the new electronic items are: Finger Bowl, 5-IN-1 Sports Stadium, Space Chase, Talking Picturebook, Talking Chalkboard, Sesame Street Cassette Player, Little Orphan Annie Phonograph, and Animal Lights.

Finger Bowl has eight action events on an oval, numbered track of a simulated, miniature sports arena.

5-IN-1 Sports Stadium features five sports games on one unit: football, baseball, basketball, hockey, and soccer.

A hand-held game in the shape of a rocketship, Space Chase involves a player maneuvering the space ship throughout the universe to avoid shooting asteroids.

Talking Picturebook is a talking companion and learning aid with 25 story pages designed to capture the attention of two to six-year-olds. It offers children fingertip access to 200 objects and corresponding words.

A picture-word match game with 10 inserts, Talking Chalkboard is a learning aid which helps children identify up to 40 different objects commonly found in his environment.

Sesame Street Cassette Player will play favorite bedtime stories and fairy tales on Tiger's child-proof cassette player.

Youngsters can listen and dance to their favorite musical melodies on the Little Orphan Annie Phonograph. The two-speed turntable plays 33-1/3 records, with a pop-up adapter for 45's.

Animal Lights, a pocket companion and carry-along, will be available in four models. The brightly colored animals — a dog, hippo, alligator, and tiger — feature a tiny light shining out of each mouth, and a battery compartment in each tummy.

Monogram unveils 37 model kits

MORTON GROVE, ILL. — Thirty-seven new items have been introduced by Monogram, including a 1/16 scale Kenworth 900 Conventional tractor as a companion piece to its 1/16 scale Peterbilt 359 released in 1980.

Also in trucks, Monogram has two new Snap Tite tractors and two Snap Tite tractor/trailer combinations. Additional Snap Tites will include an all-new category of four 1/24 scale cars featuring the Pontiac Trans Am, an exclusive license of Monogram.

Twenty-one glue-type car kits were welcomed including three in 1/20 scale and four in a lower-priced category of 1/32 scale, featuring the newly-designed 1982 Camaro Z-28. In planes, Monogram extends its line of 1/48 scale planes with five additions, featuring the Hawker Harrier.

A newly-tooled line of large sailing ships was also unveiled, featuring the USS Constitution.

Target 81

Playmobil's racing line has Schaper in the driver's seat

MINNEAPOLIS, MINN. — New themes and complementary vehicles enhance Schaper's 1981 Playmobil Toy System line.

The Playmobil Racers, to be introduced at this year's Toy Fair, feature accessories and vehicles with 3-inch, fully articulated figures. Racer sets will be available in three sizes.

Snow sports enthusiasts will enjoy the Winter Sports theme. Five miniature people come equipped with skis, sleds, skates, and ice hockey sticks.

A line of Stomper SSC Super Cycles, miniature stunt cycles that race along tracks, will also be unveiled.

The cycles run on a fly-wheel mechanism that can be changed either by battery power pack launcher or manual pull starter.

Among the new games from Schaper are Gimme Five, Entrapment, Roadrunner Dodgem, Pick-Up Chips, Profit Protector, Don't Cook Your Goose, Sombrero, and Casper.

An expanded line of miniature four-wheel drive vehicles can be expected. The Stomper 4 × 4 line features improved sealed unit chassis design, interchangeable indoor/outdoor tires, and a better selection of models.

Five new models will be highlighted: Toyota Four-Wheel Drive SR5 Long Bed Sport Truck, Datsun Li'l Hustler, Jeep Renegade, Subaru Brat, and Chevy Luv. Each model is offered in two colors with detailing for collectors.

Sombrero

Cox hits the runway with speedy planes

MINNEAPOLIS, MINN. — Cox/Leisure Dynamics introduces seven products in control line and radio control aircraft categories.

Wild Wings offers two new versions in 1981, the Delta F-15 and the Red Wing Racer. These planes are styled to appeal to the young first-time flyer.

The PT-19 Trainer, the most popular U-control plane built, has been restyled and repackaged.

Other planes in the line are the P51 Invasion Mustang, the Sopwith Camel, the Red Baron Air Racer, and the Piper Dakota.

Cox also offers The Shrike, a rear engine propeller-driven car both in free running and radio control versions. It twists, turns, and bounces, but keeps on going.

(Circle No. 661 on Reader Inquiry Card)

Coleco punches hard on Electronic Boxing

HARTFORD, CT. — Coleco is inviting boxing fans into the ring with Electronic Boxing, the newest addition to its Head to Head line of electronic sports games.

Like other Coleco Head to Head games, Electronic Boxing allows two players to compete with each other or a single player to compete against the computer.

Up to four players can match wits with Quiz-Wiz Challenger, a competitive question-and-answer game. It begins with the Quiz Wiz electronic question-and-answer format and adds the excitement of direct competition.

The total control of real bowling is available with Bowlatronic, an electronic sports game. With Bowlatronic's advanced features, players can control the ball's direction, its curve, its speed, and the time of its release.

Magic Touch, an addition to Coleco's Play 'N Learn line of teaching toys, combines education with the magic of electronics to offer children over 200 matching activities.

It is man against mosquito in Swat Swat The Mosquito. Designed for one to four players, the game tests its players' reflexes as mosquitoes swoop, dive, and land at random on one of the playing stations. Four plastic swatters are provided.

Tryom sparkles with computerized backgammon and chess sets

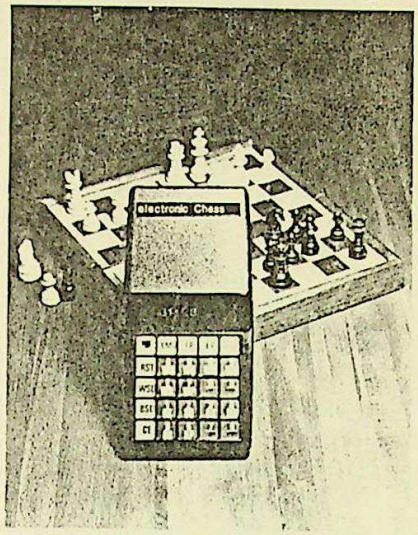
CLEVELAND, OHIO — Tryom, manufacturers of micro-processor items, will feature several advanced electronic games that include bridge, backgammon, and chess.

Both the Omar I and Omar V computerized backgammon games pit one's intellect against the electronic wizardry of Omar. A portable 9 inch magnetic board makes the Omar I easy to transport. The Omar V employs a running game, back-game, semi-back game, and bear-off strategies.

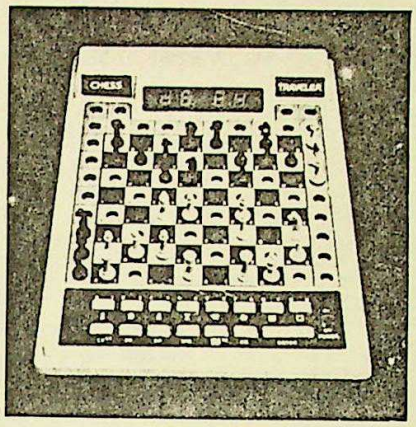
The Gammonmaster II, the most sophisticated computer game in the line, makes it impossible to cheat or make an error since the computer verifies all moves.

Goren Bridgemaster employs Goren's American style of bridge play, and will assume any number of hands at two levels of skill. Playing conventions include Gerber, Blackwood, Stayman, Two Strong, Take Out Double, Penalty Double, Preempt Bid, and Reverse Bid.

An 8-level chess computer is a hand-held battery operated game that comes with an 8 inch magnetic wooden chess set, playing pieces, and operates on AC or DC. Special features include a problem-solving mode, position verification, audio feedback, En Passant capture, and pawn promotion.



Electronic Chess



GMT-1000

The Chess Traveler GMT 1000 is a lightweight, portable set that has 7 levels of play, beginner to expert. Random computer responses vary the strategy and play from game to game.

Effanbee recreates Wayne-American

NEW YORK — Effanbee Doll will unveil John Wayne–American, the second in the firm's Legend Series.

This 17-inch collector's doll depicts "The Duke" in red "longjohns" and a corduroy shirt.

Other introductions for 1981 include Send In The Clowns, a group of five Pierrots; Hattie Holiday Collection, a freckled toddler with four holiday outfits, and new Faith Wick originals, such as Wicket Witch, Hearth Witch, and Peddler woman.
(Circle No. 688 on Reader Inquiry Card)

Grain embargo enlivens McJay farmer game

DECATUR, AL. — McJay's Rich Farmer, Poor Farmer game now contains the elements of grain embargo and gasohol. The first farm game on the market, Rich Farmer, Poor Farmer allows players to experience the responsibilities of farm ownership and development. The players begin with $25,000 and the object is to survive financially. It is designed for two to six players. There are six games packed to a carton measuring 20×8×10″.

McJay's arm puppet and doll division introduced puppets and dolls featuring the registered "loving arms around you" design. Each is 48 inches long and made of non-allergenic, non-toxic materials with safety-locked nose and eyes. The Wookie, Jasper and Grannie puppets come in rust, black, or champagne plush fur. Jasper and Grannie feature curled tails with a leather-like face and ears. The complete line is machine washable and packed 12 or 24 to a carton.

McJay's Command Ship Invasion, a new board game of Rodger's Game, has been designed for two players, 10 years and up. The object is to invade the opponent's territory and destroy the command base or command ships in one of five winning combinations.

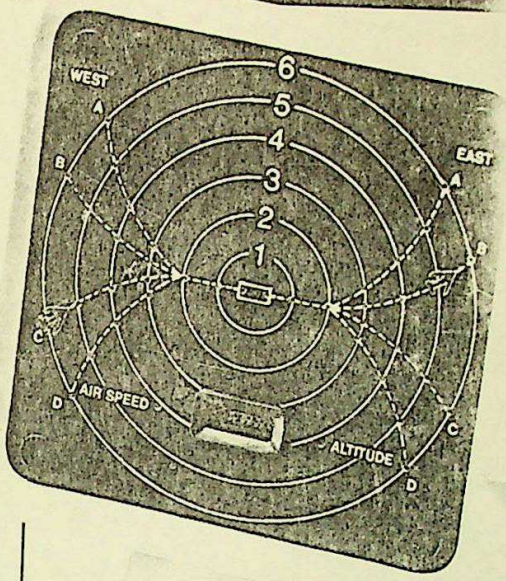
BORING, THEY'RE NOT.

Boring is the one thing a good electronic game should never be. And it never is, when it's a Bandai Electronic Arcade game.

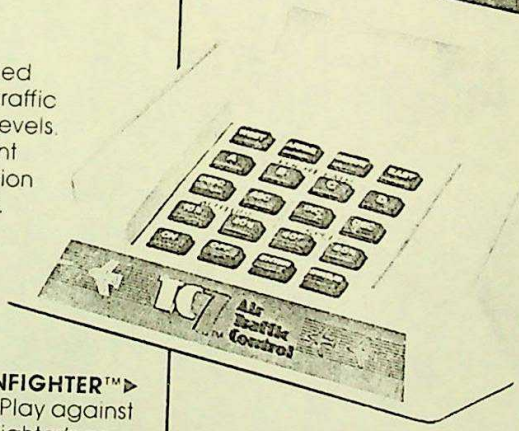
Bandai was one of the pioneers in electronic games, and continually produces the most innovative games in the marketplace.

Exciting, involving, innovative, appealingly priced, Bandai Electronic Arcade games are the State of the Art, from one of the largest and most dependable toy companies in the world.

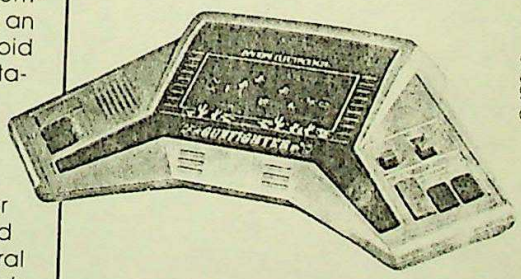
Bandai Electronic Arcade. Boring, they're not.

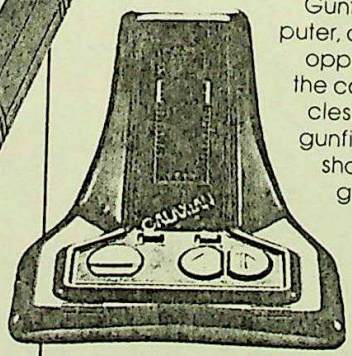


TC-7 AIR TRAFFIC CONTROLLER™▶
All the realistic, fast-paced excitement of a real air traffic control center. Four skill levels. Game scores higher point totals for fastest completion of takeoffs and landings.



GUNFIGHTER™▶
Play against Gunfighter's computer, or against an opponent. Avoid the cactus obstacles. When a gunfighter is shot down, gunfighter falls over and funeral march plays!





MIRACLE BASEBALL™▲
The most advanced baseball game on the market, with base stealing, sacrifice flies, double plays, bunting, six pitch variations, remote player controls. Defensive players move to actually catch the ball. 4" × 3" liquid crystal screen is the industry's largest.

GALAXIAN™▲
One of the hottest selling electronic games in the entire country. Five color fluorescent read-out. Invaders fire head-on and at varying angles. Visual explosions and arcade sounds. Two skill levels to challenge even the most expert players.

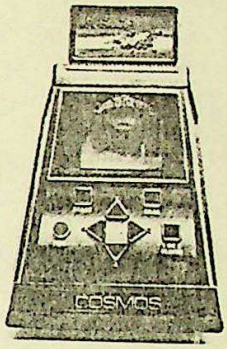
Clockwise from left: the Tabletop Game Machine by Entex; Mattel's Children's Discovery System; Speak & Read from Texas Instruments; Electronic MasterMind by Invicta, and Atari's Cosmos game.



always be there for games that offer more play features to control, and the opportunity for more people to play at a popular price point. Katz does admit, however, that the company is putting more emphasis on its Telstar Video game line this year than ever before.

Most retailers consider this the right direction to take. Almost all who stocked the Atari video game line and Mattel's Intellivision reported success, sometimes with surprise.

Cassler, whose store began stocking video games three years ago mainly as a side line to entertain the employees on slow nights, managed to sell over 40 Intellivision sets this past holiday season. Luckily, he says, no one else around Burlington stocks Intellivision.

The manufacturers stress that with the rising cost of entertainment, consumers are willing to spend more money on a home video or computer unit that can be updated each year with new programs. With today's technology, they stress, the only limits are the imaginations of the programmers. Psychologists say this new form of home entertainment will result in greater emphasis on getting together with family and friends for group activities.

Television advertising, according to both manufacturers and retailers, seems almost as important to the electronic game market as the software itself.

"We just won't buy anything that is not TV advertised," explains Gleichenhaus. "Since we do not have much on-the-job help to offer the customer, he must be pre-sold before walking into the store."

John Baiocchi, national sales manager for Imaginamics, a company less than a year old, says he learned quickly that in electronics, promotion is more than half the battle, and that without television, you don't have a chance. He is planning to spend $1 million to promote his

TWICE A MONTH WITH TWICE AS MUCH AS BEFORE

PLAY METER MAGAZINE

by two short roll-over wires down and out. When lit, the wires have their own special value (more in a second on that). And that's the basic layout.

ANALYSIS: Talk about your game-within-a game-concept, this machine goes one step further and even adds in a left-side counter—just to the right of the left flipper button on the metal overlay where the readout is for rounds and rounds won. After all, if you're going to use America's success story, you've got to go for the knockout and *Rocky* attempts it with a totally integrated effort that should leave any pinball player slightly punch drunk.

The way the game has been designed and the strategy involved for maximizing the scoring chances calls for players to hit down the numbered drop targets around the board in sequence in order to win a round before the time is up and the round is lost. Winning rounds can bring bonus multiplier of 2X, 5X, or 10X depending upon the incremental buildup. Although even losing a round doesn't mean that much of a negative to a player if he can survive up to 10 rounds, and light that center blue target in the upper bank for an extra ball.

But it's all a question of getting into the flow of game that has the player going for the top, then the lower right side, over to the lower left side, and then back up to the top, and so on. If you want to take it one step further, it's almost like fighting someone—going for the head and then following with a right and left to the body, with five flippers supplying the punching power.

The right-side flipper button controls the lane lights on top right and below as well as the lighting of the thumpers and an increase in their value, while the left side features an additional flipper button for activating an instant winning round when the center kick-back kicker is lit and the ball enters into it.

What may be more of a concern to players in trying to set up an approach to get into the game, is that the scoring tends to be low. In fact it's a bitch to really get to the point where big numbers can be achieved. The shooting angles by the configuration of design tend to make the movements up and down rather than comfortably side to side, where some spacing is almost too severe to make it a standard part of the repertoire—like going from the left side bottom over to the right side bottom, or vice versa, although this is somewhat easier.

Neither are helped, however, by the size of that center kick-back kicker that cuts off a measure of space from the lateral play.

GRAPHICS: Hats off to the essence of what has become an American symbol of achievement (although Gerry Cooney might not feel like the embodiment of the Philadelphia story). True to form is old

(54) Joy stick

(57) A joy stick assembly has a joy stick (26) resiliently mounted with a rubber tyre valve stem (38) in an opening (44) through a hand holdable housing (22, 24), so that it is normally biased to a neutral position. The joy stick is manually pivotable in any one of a plurality of directions through a 360° arc, and has a conductive sphere (48) at its opposite end. Four contacts (56, 60) are shown in Fig. 2 are positioned at 90° apart around the sphere and out of contact therewith when the sphere is in its neutral equilibrium position, and the joy stick is manipulable to establish electrical connections between the sphere and individual ones or adjacent pairs of the contacts to provide a signal from the sphere to the contact or contacts. With separate electrical connections established between the sphere and the four contacts and a TV video game, the joy stick is manipulable to supply nine discrete signals to the game, four upon electrical connections between the sphere and individual ones of the contacts, another four upon electrical connections between the sphere and adjacent pairs of contacts and a further one when the sphere is in its neutral position.

SPECIFICATION

Joy stick

The present invention relates to joy stick assemblies, for example, for operating such things as TV video games and X—Y translating mechanisms.

Joy stick assemblies for use with TV video games for controlling X—Y translations of an image on a TV screen are known in the art. Conventionally, such an assembly comprises a hand holdable box-like housing and a control lever or joy stick extending through a wall of the housing. Switches or contacts within the housing are electrically connected with an input to the video game, and are arranged to be actuated or contacted by the joy stick in response to manual manipulation of the same, thereby to control bidirectional horizontal and/or vertical movement of an image on the screen.

A disadvantage of such joy stick assemblies is that, in an attempt to fabricate them in an economical manner so that the selling price of video games will be within reach of the average purchaser, the resulting assembly is often quite flimsy and prone to breakage, particularly in the hands of a child. In addition, such assemblies are often quite spongy in their operation, with the result that an operator does not have a "feel" for the game being played, while at the same time movement of the image on the TV screen in response to manipulation of the joy stick is inaccurate and slow.

In addition to use with TV video games, joy stick assemblies also find use in industrial manufacturing operations, such for example as with thermal compression or ultrasonic bonders which use an X—Y translating mechanism having a platform which supports a semi-conductor chip and moves the same relative to and below a bonding tool of the bonder, so that electrical lead wires can be connected to the chip at various locations thereon. Such a translating mechanism is operated by two motors, one for driving the platform back and forth along one line and another for moving the platform back and forth along a second line perpendicular to the first.

The control means for operating the motors of such bonders often comprises a joy stick assembly manipulated by a machine operator as he views the work area of the chip through a microscope. Conventional joy stick assemblies for this purpose have been quite complicated in construction, and have used potentiometers or other switching devices for varying the voltages applied to the motors, so that the motors stop and go as a function of the change in position of the joy stick. Because of the complex nature of such assemblies, they are costly to produce and assemble and must often be repaired or replaced due to faults in the parts thereof.

An object of the invention is to provide an improved joy stick assembly which is simple and rugged in construction, is inexpensive to produce operator and can be used as a replacement part for a conventional joy stick device.

In accordance with the present invention, a joy stick assembly comprises a housing having an opening therethrough, a joy stick extending through said opening, said joy stick having a resilient member there-around pivotally mounting said joy stick on said housing in said opening for movement in any direction throughout a 360° arc from an equilibrium position to an operative position and return a member of electrically conductive material at one end thereof; and a plurality of contact elements of electrically conductive material on said housing in an array in surrounding relationship to said conductive member, said conductive member being out of engagement with said contact elements when said joy stick is in said equilibrium position and each of said contact elements being engageable by said conductive member as a function of pivotal movement of said joy stick away from said equilibrium position in a predetermined direction to electrically connect said conductive member with said contact elements.

The invention will be further described, by way of example with reference to the accompanying drawings in which:—

Fig. 1 is a perspective view of a joy stick assembly of a type with which the present invention may advantageously be used;

Fig. 2 is a cross sectional side elevation view taken substantially along the lines 2—2 of Fig. 1, showing the manner in which a joy stick or control lever is mounted on a housing of the assembly for manipulation in directions to selectively engage a lower conductive end thereof with contacts within the housing;

Fig. 3 is a top plan view taken substantially along the lines 3—3 of Fig. 2, and illustrates the arrangement of contacts within the housing and the positioning of the lower conductive end of the joy stick with respect to four of the contacts;

Fig. 4 is a top plan view taken substantially along the lines 4—4 of Fig. 2, and shows the directions of movement of the lower end of the joy stick for contacting individual ones or adjacent pairs of the four contacts;

Fig. 5 is a cross sectional side elevation view taken substantially along the lines 5—5 of Fig. 3, and illustrates the configuration of one of the contacts and its mounting on the housing; and

Fig. 6 is a cross sectional side elevation view taken substantially along the lines 6—6 of Fig. 3, and shows a switch for initiating an operation, control over which is then exercised by means of manipulation of the joy stick.

Referring to Fig. 1, a joy stick assembly 20 comprises a hand holdable box-like casing formed by an upper housing portion 22 and a lower housing portion 24. A joy stick or control lever 26 is pivotally carried in an upper wall 28 of the upper housing and a pushbutton type start switch 30 is also carried by the housing and extends through the wall. The joy stick assembly is particularly

VIDEO PAINTER™

Turn your TV into a work of art

VIDEO TECHNOLOGY INDUSTRIES INC.
1991
REF. 29/003060

For ages 5 and up

Now it's easy to create works of art at home with the Video Painter. This electronic sketch pad hooks directly into your TV to provide hours of entertainment and imagination to young artists. Use the special object and character libraries, easy to use drawing commands, and predrawn backgrounds, or start from scratch. Anyway you try it, art is now easier and more fun!

- 12 Vibrant colors and 6 different patterns to draw and paint with.
- Art library includes over 50 predrawn vehicles, shapes, animals, fantasy characters, people, stamps and more!
- Easy to use drawing commands and attached pen. Special lock button holds Video Painter in the drawing mode. Move, copy, or enlarge pieces of art to touch up pictures.
- Animation mode brings objects to life
- Left and right mark buttons.
- Connects to VCR for picture storage or directly into TV. Nothing else required.
- Operates with 9 volt AC adapter or 6 D cell batteries (not included).

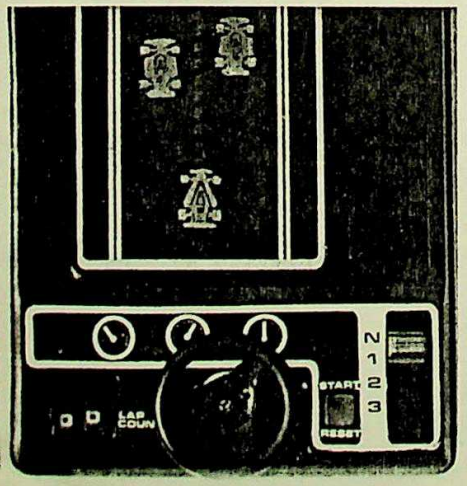
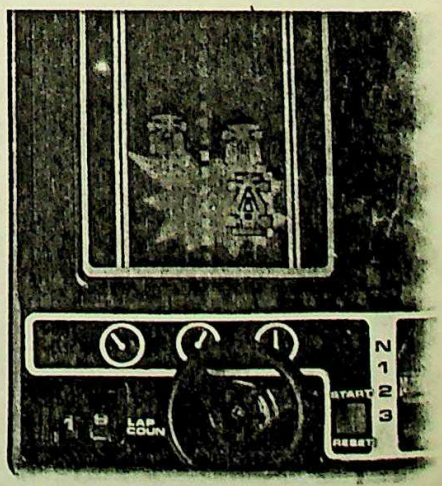
Digital Derby™ TV

This new digital auto race will have kids racing for their toy stores. It looks and works just like the big electronic arcade raceway games, but you can carry Digital Derby around with you. Steer and shift, racing against other cars, to avoid accidents and move through traffic. If you crash, the alarm flashes and costs you laps. How many laps can you race before the time runs out? Equipped with lap counter, reset button and automatic timer. Two "AA" batteries, not included. Race drivers ages 6 and up will rev up their engines when they see it.

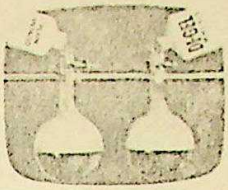
Stock No.: 7034
Standard Pack: 12
Carton Weight: 12 lbs.
Individual Size:
9" x 6" x 2¼"
Pat. Pend.

P. 32

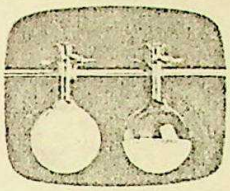




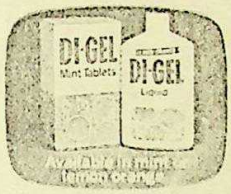
F-33



These identical mixtures of laboratory acid and gas represent the misery of acid indigestion complicated by gas. A plain antacid is added to one, Di-Gel to the other.



Di-Gel quickly neutralizes the acid and breaks up the gas. The plain antacid is not made to relieve this problem. It works only on the acid, while Di-Gel relieves both. Read and follow label directions.



Get fast relief. Get the Di-Gel® Difference.

Computer chess: Easy to play, not easy to beat

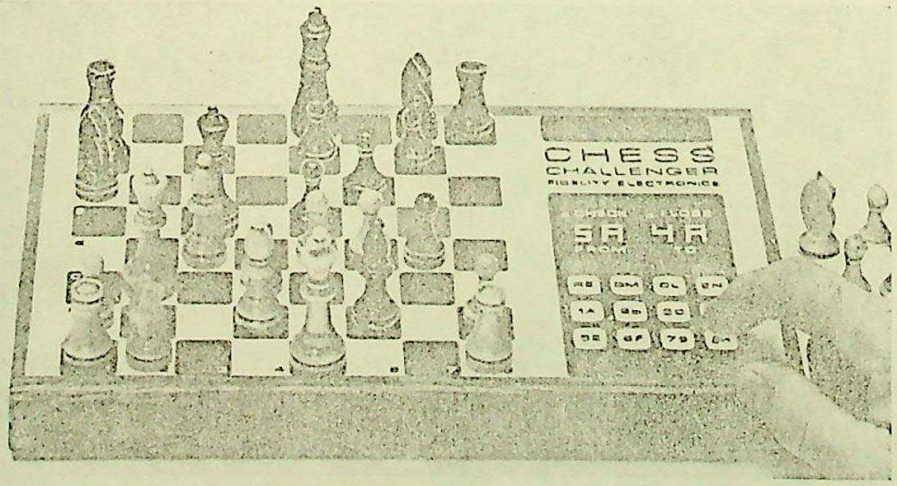
It used to take a computer big enough to fill a kitchen, but no more. To play chess against a computer today, all you need is a compact board-sized Chess Challenger.

The $199 game has a full-blown computer inside, programmed at a level to challenge experts while teaching beginners. Average players beat it 25 to 70 percent of the time.

You talk to the computer via a keyboard. It talks back in red LEDs above the keys. The board has special lettering you use to key plays into the computer. Moves even include castling and en passant!

The set, with wooden pieces, is available from Chafitz, 1055 First St., Rockville, Md. 20850. It's also in the fall catalog from Heath Co., Benton Harbor, Mich. 49022.

It's wired and tested and plugs into 110-volt a.c. Great for learning and practicing, it even can tune and sharpen the game of an expert.—*Judy Curtis*

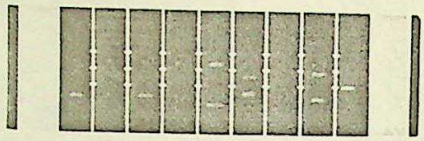


Instant chess partner is Chess Challenger, a computerized board by Fidelity Electronics.

Compare

Look at this low price for your choice of three of the most popular electronic sports games ever **$22.99** each without batteries

Have a road race in your living room, shoot baskets in the kitchen or play football while riding in a car! These hand-held electronic games are fun you can take almost anywhere . . . at a price almost anyone can afford.



The computer controls the defense and you control the offense as you try to score an **Electronic Touchdown!** Get all the excitement of a real football game as you block, run, kick and even pass. Shake tacklers as you race downfield. Set up a pass play and throw the bomb. Two different skill levels let you speed up the defense to play "Semi-Pro" or "Pro". Two players can compete by controlling the opposing offenses. Electronic sound effects include referee whistles and even a song that plays when a touchdown is scored. LED displays give you time, score, downs, yards-to-go and field position. Solid state design with plastic case 7x4¼x1¼ inches high.

AGES: 8 to adult.

ORDERING INFO: Requires one 9-volt battery or AC adapter, not included, order below.

49 TH 65352—Shpg. wt. 12 oz. **$22.99**

DieHard 9-volt Alkaline Battery (not shown).
49 C 46859—Shpg. wt. 2 oz. . . . . Each **$1.49**

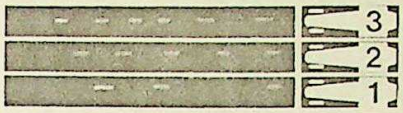
AC Adapter for Electronic Touchdown (not shown). UL listed. For use with 6, 7½ or 9-volt electronic games. Miniature and sub-miniature adjustable plugs, 9-volt battery clip tip included. 110–120-v., 60-Hz. AC. 6-ft. cord. Not for children under 8.
49 TH 65244—Shpg. wt. 6 oz. **$4.99**

Electronic Basketball pits your basketball skills against a computerized defense. It's a race against time as you move onto the court and drive past the defensive players for a lay up. Shoot as many baskets as you can before the timer counts down 24 seconds. Action includes blocked shots and rebounds. Two skill levels let you speed up the defense to make scoring more challenging. Two-player memory lets you take on an opponent. Sound effects for a basket made, turnover, end of quarter, blocked shot and end of game. LED scoreboard. Solid state design. Plastic case measures 5⅞x3½x1¼ inches high overall.

AGES: 8 to adult.

ORDERING INFORMATION: Requires 4 "AA" batteries, not included, order at right.

49 TH 65453—Shpg. wt. 8 oz. **$22.99**



Auto Race brings you the thrill of realistic raceway action. Try to complete 4 laps before timer counts down 99 as you shift gears and gun it up to high speed. Avoid collisions by cutting from lane to lane in a series of close calls. Hear your "motor" roar as you shift gears. Hear sound effects for victory, defeat and crack-ups. LED scoreboard shows elapsed time, counts laps and number of collisions. Solid state design. Plastic case. 5½x3½x1¼ in.

AGES: 7 to adult.

ORDERING INFORMATION: Requires 3 "AA" batteries, not included, order below.

49 TH 65452—Shpg. wt. 8 oz. **$22.99**

DieHard "AA" Alkaline Batteries (not shown). For above and at left. Package of 2.
49 C 46819—Shpg. wt. 2 oz. . . . . Pkg. **$1.19**
